1 SYMBOLS AND UNITS OF MEASURE

Symbols	Units of Measure	Description
$A_{c1,2}$	[N]	Calculated thrust load
$A_{n1,2}$	[N]	Rated thrust load
A_{r2}	[N]	Thrust load at gearbox output shaft
F_h	—	Lifetime factor for gearbox calculation
$F_{h1,2}$	—	Lifetime factor for bearing calculation
$f_{n1,2}$	—	Speed factor referred to input and output shaft loading
f_L	—	Lifetime factor
f_m	—	Increase factor
$f_{h1,2}$	—	Load corrective factor on shafts
f_s	—	Service factor
f'_s	—	Service factor required by the application
f_t	—	Thermal factor
f_v	—	Speed factor
h	[h]	Lifetime in hours
i	—	Reduction ratio
K_a	—	Axial load duty factor
K_r	—	Radial load factor
I	—	Intermittence factor
M_2	[Nm]	Torque delivered to output shaft
M_{c2}	[Nm]	Calculated torque at gearbox output
M_{2REF}	[Nm]	Reference torque
M_{n2}	[Nm]	Gearbox rated output torque
M_{2max}	[Nm]	Gearbox max. output torque
M_b	[Nm]	Rated brake torque
$M_{r1,2}$	[Nm]	Required torque at gearbox
$n_{1,2}$	[min ⁻¹]	Angular speed

Symbols	Units of Measure	Description
p	[bar]	Hydraulic oil pressure
P_1	[kW]	Max transmissible power at gearbox input
P'_1	[kW]	Transmitted power at gearbox input
P_2	[kW]	Transmitted power at gearbox output
P_n	[kW]	Motor rated power
P_{r1}	[kW]	Required input power
P_{r2}	[kW]	Output power at n_2 max
P_{r2}'	[kW]	Output power at n_2 min
P_s	[kW]	Excess power
P_t	[kW]	Gearbox thermal capacity
Q	[l/min]	Hydraulic flow rate
$R_{c1,2}$	[N]	Calculated radial load
$R_{n1,2}$	[N]	Rated radial load at shaft mid-point
$R_{x1,2}$	[N]	Rated radial load at gearbox re-calculated with respect to different load application points
t_a	[°C]	Ambient temperature
t_s	[°C]	Surface temperature
t_o	[°C]	Oil temperature
V	[cm ³]	Hydraulic motor displacement
V_c	[cm ³]	(Theoretical) Hydraulic motor displacement
X	[mm]	Load application distance from shaft shoulder
η_d	—	Dynamic efficiency
Z	—	Frequency of starts

₁ value applies to input shaft

₂ value applies to output shaft

2 INTRODUCTION

This catalogue presents BONFIGLIOLI RIDUTTORI's range of Series 300 modular planetary gearboxes. The range has been expanded and integrated with new sizes, technical improvements and enhanced modularity right through to the larger sizes. This feature signifies greater flexibility in internal production to ensure quick availability of products in the sizes and types requested either directly from the company or from the many affiliates belonging to the BONFIGLIOLI sales network in various countries around the world.

The gearboxes are tested in conformity with the following standards:

ISO 6336 : 2006 - method B for gears

ISO 281 for bearings

DIN 743 : 2012 for shafts

3 ALLOWED TEMPERATURE LIMITS

Symbols	Description / Condition	Value (*)	
		Synthetic Oil	Mineral Oil
t_a	Ambient temperature		
$t_{au\ min}$	Minimum operating ambient temperature	-30°C	-10°C
$t_{au\ Max}$	Maximum operating ambient temperature	+50°C	+40°C
$t_{as\ min}$	Minimum storage ambient temperature	-40°C	-10°C
$t_{as\ Max}$	Maximum storage ambient temperature	+50°C	+50°C
t_s	Surface temperature		
$t_{s\ min}$	Minimum gearbox surface temperature starting with partial load (#)	-25°C	-10°C
$t_{sc\ min}$	Minimum gearbox surface temperature starting with full load	-10°C	-5°C
$t_{s\ Max}$	Maximum casing surface temperature during continuous operation (measured next to the gearbox input)	+100°C	+100°C (@)
t_o	Oil temperature		
$t_{o\ Max}$	Maximum oil temperature during continuous operation	+95°C	+95°C (@)

(*) = Refer to the table "Selection of the optimal oil viscosity" for further information about minimum and maximum values of different oil viscosity and for using hydraulic circuits. For values of $t_a < -20^\circ\text{C}$ and $t_s, t_o > 80^\circ\text{C}$, choose (as permitted in the product configuration stage) the sealing type of the most suitable material to the type of application. If needed contact Bonfiglioli Technical Service.

(@) = Continuous operation it is not advised if t_s and t_o range is 80°C to 95 °C.

(#) = For full load start-up it is recommended to ramp-up and provide for greater absorption of the motor. If needed, contact Bonfiglioli Technical Service.

4 SPECIFICATIONS

The 300 series consist of a range of multi-purpose planetary gearboxes that can be operated by either hydraulic or electric motors. Basic features are:

- 20 frame sizes of modular design
- output torque up to 1,286,700 Nm
- transmissible power up to 1050 kW
- ratios from 3.4:1 to 5234:1
- versions:
 - in-line with 1 to 4 reductions
 - right angle (spiral bevel gear set into first stage) with 2 to 4 reductions
- combinations with:
 - worm gear units
 - bevel-helical gear units
- flange, foot and shaft mounting arrangements
- slow output shafts: keyed, splined male, splined hollow, shrink disk mounted
- input adaptors for:
 - IEC-normalised electric motors
 - integral motor for in-line units up to size 307 and for units combined with bevel helical and worm gears
 - hydraulic motors by major manufacturers and according to SAE J744C
- parallel input shafts
- gearmotors with:
 - electric motors IEC
 - hydraulic orbital motors by BONFIGLIOLI TRASMITAL MG
- negative hydraulic parking brakes for operation by hydraulic motors
- output shaft accessories:
 - flanges
 - pinions
 - splined bars
 - shrink discs

More design features:

- high ratio of transmissible torque to overall dimensions
- high overhung and axial load capacity due to heavy duty tapered roller bearings featured on H and P versions
- high efficiency
- inner parts are coupled through splined connections rather than keys
- planetary gears mounted onto self-centering carriers to ensure the most even load distribution among planetary gears
- housing made of spheroidal cast iron.

Configurations

(A 1)

Configuration	Power	Torque	Ratios	Efficiency	Noise level
	$0.25 \leq P_n [\text{kW}] \leq 55$	$M_{2\text{REF}} \leq 1286700 \text{ Nm}$	$3.4 \leq i \leq 2916$	High	Medium
	$0.25 \leq P_n [\text{kW}] \leq 55$	$M_{2\text{REF}} \leq 656000 \text{ Nm}$	$7 \leq i \leq 953$	High	Medium
	$0.12 \leq P_n [\text{kW}] \leq 22$	$M_{2\text{REF}} \leq 656000 \text{ Nm}$	$370 \leq i \leq 5234$	Medium	Low
	$0.12 \leq P_n [\text{kW}] \leq 22$	$M_{2\text{REF}} \leq 15680 \text{ Nm}$	$18.7 \leq i \leq 731$	High	Low

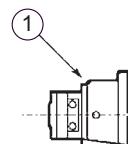

5 VERSIONS

A INPUT

A

- 1 Orbital hydraulic motor MG with/without brake
- 2 Hydraulic motor
- 3 Hydraulic motor setting
- 4 Cover
- 5 Negative brake
- 6 Compact electric motor
- 7 IEC electric motor
- 8 Electric motor setting
- 9 Input shaft
- 10 Solid input shaft with fan

②

③

④

⑤

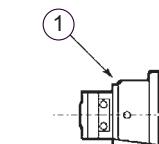

⑥

⑦

⑧

⑨

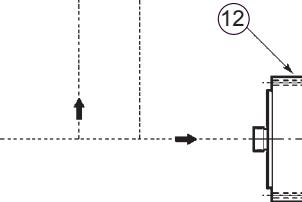

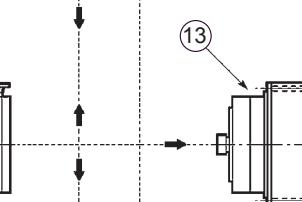

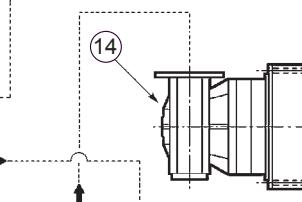

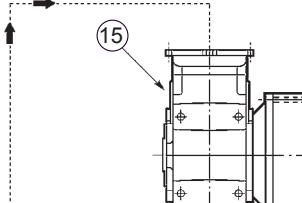

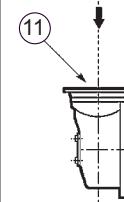

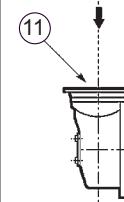

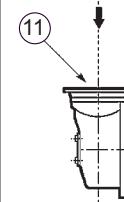

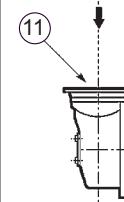

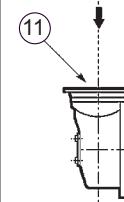

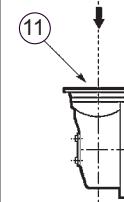

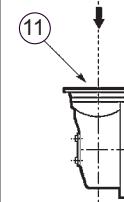

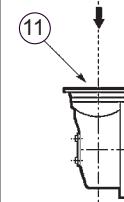

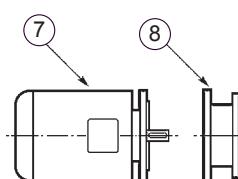

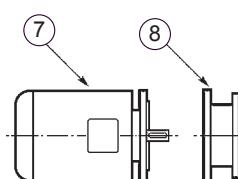

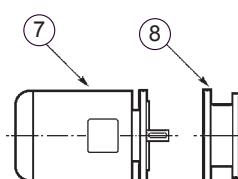

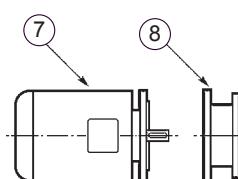

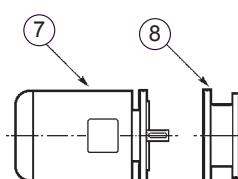

⑩

B REDUCTIONS

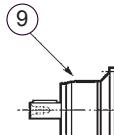

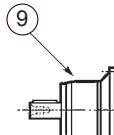

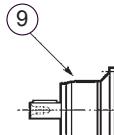

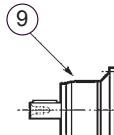

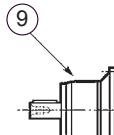

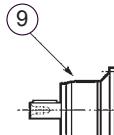

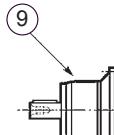

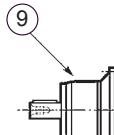

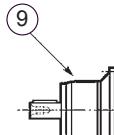

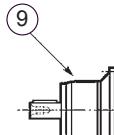

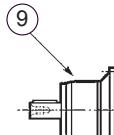

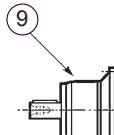

B

- 11 Right-angle reduction stage
- 12 Single planetary reduction stage
- 13 Two or more planetary reduction stages
- 14 Planetary reduction combined with wormgear unit
- 15 Planetary reduction stage combined with helical bevel gear unit

C

- 16 MC/MZ - Keyed or splined solid shaft output
- 17 HC/HZ - Keyed or splined heavy duty solid output shaft
- 18 PC/PZ - Output with support bracket and keyed or splined solid shaft
- 19 FZ - Splined hollow output shaft
- 20 FP - Hollow output shaft for shrink disc
- 21 HC - Parallel solid output shaft
- 22 HZ - Splined solid output shaft
- 23 FZ - Splined hollow output shaft
- 24 FP - Hollow output shaft for shrink disc
- 25 PC - Foot mount
- 26 VK - Reinforced output with parallel shaft for stirrers and mixers
- 27 FDK - Hollow shaft with double keyway
- 28 FZP - Hollow splined shaft with axial blockage device

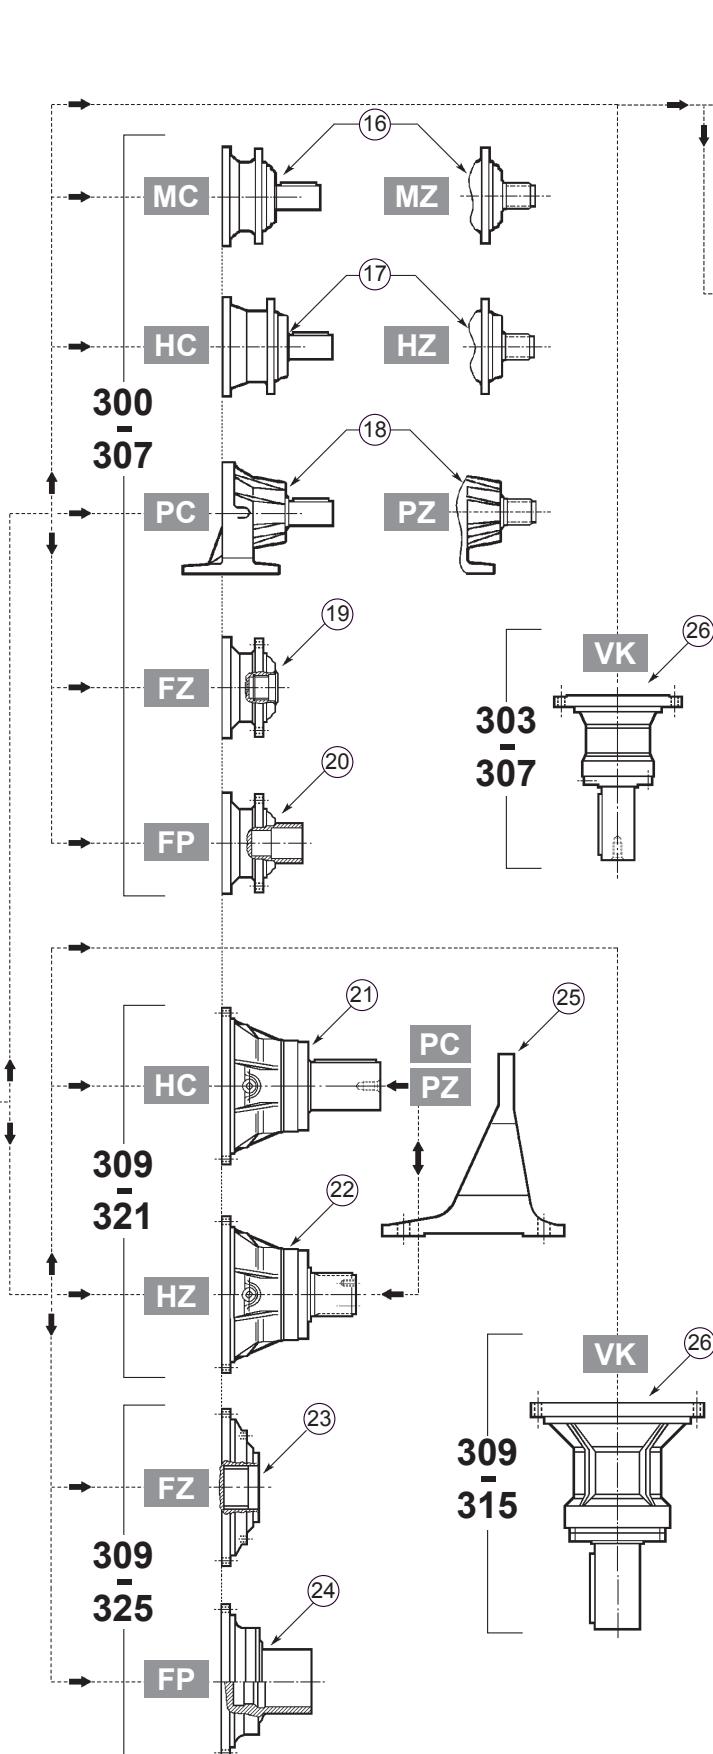

D

- 29 W0A - Flange
- 30 P_ - Pinion
- 31 M0A - Sleeve coupling

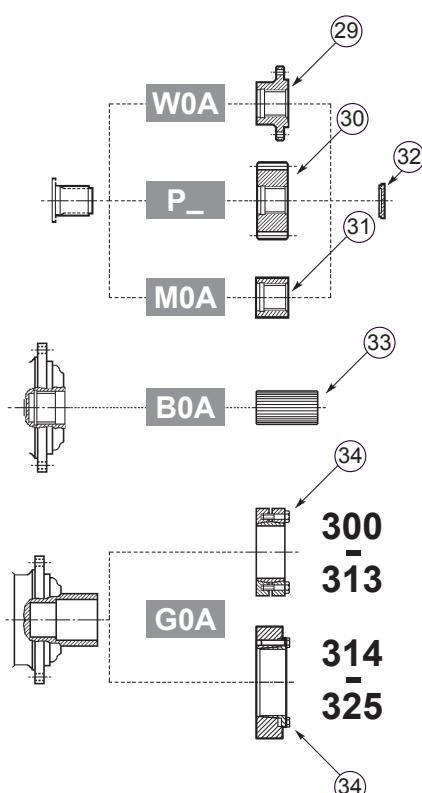

- 32 End plate
- 33 B0A - Splined bar
- 34 G0A - Shrink disc

C OUTPUT

D FITTINGS

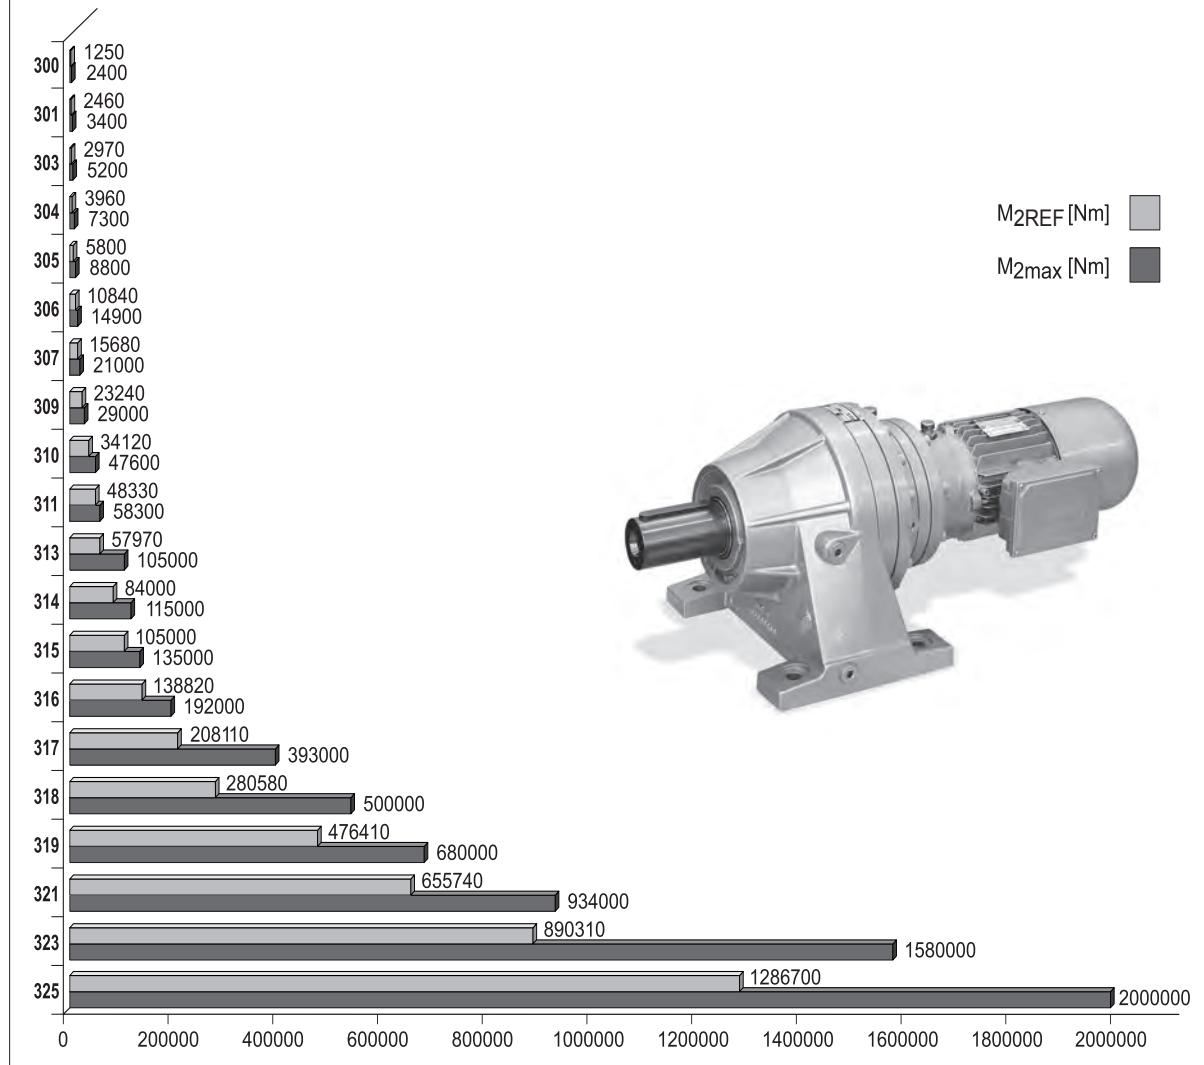

GENERAL INFORMATION

The following paragraphs contain information on essential elements for selection and correct use of gearmotors.

6 OUTPUT TORQUE

(A 2)

6.1 Reference torque $M_{2\text{REF}}$ [Nm]

It is the significant value for the size. It is equivalent to the maximum value of nominal torque M_{n2} for a life factor $n_2 \times h = 10000$ (referred to single stage configuration L1).

6.2 Rated output torque M_{n2} [Nm]

It is the output torque which the gearbox can transmit with steady load under working condition specified in the calculation method.

6.3 Maximum torque $M_{2\max}$ [Nm]

It is the output torque that the gearbox can withstand under static or almost static conditions. It is generally meant as a momentary peak load or starting-up torque under load.

The values in the tables are valid only in versions with output splined shaft (accessories excluded).

6.4 Required torque M_{r2} [Nm]

The torque drawn by the application. It must always be equal to or less than rated output torque M_{n2} for the gearbox under study.

7 POWER

7.1 Input rated power P_{n1} [kW]

P_{n1} is the maximum power that can be safely applied to the gearbox when the same is operated:

- at a n_1 drive speed
- yielding a theoretical lifetime of 10000 hours
- service factor $f_s=1$

Check that the formula here below is always satisfied:

$$P_1' \times f_s \leq P_1 \quad (1)$$

7.2 Output power P_2 [kW]

This value is the net power delivered to the output shaft.

It can be calculated through the following formulas:

Efficiency values are listed in table (A3).

$$P_2 = P_1 \times \eta_d \quad (2)$$

$$P_2 = \frac{M_{r2} \times n_2}{9550} \quad (3)$$

7.3 Thermal power P_t [kW]

This parameter is linked to the gearbox thermal limit. Values for the thermal capacity are listed with in the rating charts of gearboxes and gearmotors and represent the mechanical power that can be transmitted continuously at an input speed n_1 and at an ambient temperature of 20°C, without the lubricant exceeding the temperature of 85-90°C and the gear case the temperature of 75-80°C, without the use a supplementary cooling system.

8 EFFICIENCY

8.1 Dynamic efficiency η_d

The parameter is defined as the relationship of the net power delivered to the output shaft P_2 to the power applied to the input shaft P_1 :

$$\eta_d = \frac{P_2}{P_1} \quad (4)$$

Indicative values for the efficiency are listed in the chart here after.

(A 3)

No. of reductions	Configuration		
	Planetary	Combined with worm gear unit	Combined with right-angle unit
1	0.97	—	—
2	0.94	0.73	—
3	0.91	0.70	0.91
4	0.88	—	—

9 REDUCTION RATIO i

It is defined as the relationship of the speed the input shaft is driven at and the speed delivered at the output shaft of a gearbox.

$$i = \frac{n_1}{n_2} \quad (5)$$

10 ANGULAR SPEED

10.1 Input speed n_1 [min⁻¹]

The speed the gearbox is driven at.

The value is coincident with the motor speed if this is directly connected to the gearbox.
Input speed should never exceed the $n_{1\max}$ value listed in the gearbox rating chart.

10.2 Output speed n_2 [min⁻¹]

It is calculated from drive speed n_1 and gear ratio i , as per the following equation:

$$n_2 = \frac{n_1}{i} \quad (6)$$

11 SERVICE FACTOR f_s

This is the relationship of the gear unit rated power to the power of the electric motor actually driving the unit.

$$f_s = \frac{P_{n1}}{P_1} \quad (7)$$

12 SERVICE FACTOR REQUESTED BY APPLICATION f_s'

It's a coefficient that represents the severity of the application. This factor takes into account, although approximately, the type of load the gearbox operates with, the specific duty cycle as well as the operating daily hours.

The table (A4) is of reference when determining the appropriate service factor for the application.

(A4)

		Service factor f_s' required depending on the application				
Type of load	Number of starts/hour z	Total operating hours (h)				
		≤ 5000	10000	15000	25000	50000
		Daily operating hours (h)				
Uniform load	$h < 4$	1.00	1.25	1.45	1.60	1.75
	$10 < h < 30$	0.95	1.15	1.30	1.50	1.80
	$30 < h < 100$	0.90	1.00	1.15	1.30	1.60
Moderate shock load	$h < 4$	1.00	1.25	1.45	1.60	1.75
	$10 < h < 30$	1.10	1.40	1.60	1.80	2.00
	$30 < h < 100$	1.00	1.20	1.45	1.60	1.80
Heavy shock load	$h < 4$	1.20	1.50	1.70	2.00	2.40
	$10 < h < 30$	1.30	1.60	1.80	2.10	2.60
	$30 < h < 100$	1.40	1.75	2.00	2.30	2.80

13 LIFE FACTOR F_{h1}, F_{h2}

Factor resulting by multiplying angular speed at input (n_1) or output (n_2) by actual operating working hours h , break times excluded.

$$F_{h1} = (n_1 \times h) \quad (8)$$

$$F_{h2} = (n_2 \times h) \quad (9)$$

Life factor is directly proportional to gearbox rpms during the whole duty time

The form, duly filled in, can be forwarded to our Technical Service which will assist the Customer in selecting the most suitable drive for the specific application.

14.1 PRODUCT SELECTION GUIDE

NOTE:

The selection criteria and specifications reported in this catalogue are not valid for every and each application, including those where the gearbox operates as a safety device preventing injury to persons or damage to objects, as is the case with hoisting equipment.

For these applications, the gearbox should be selected according to specific criteria and in compliance with the applicable safety regulations. Should this be the case we recommend that you seek advice from BONFIGLIOLI Technical Service.

For the selection of gear units in Atex configuration, see also the specific chapter on page 480.

14.2 METHOD A (Gearbox selection by power)

Based on application type, it should be defined :

a) Required service factor f_s' (see tab A4);

b) Required drive power:

$$P_{r1} = \frac{M_{r2} \times n_2}{9550 \times \eta_d} \quad (10)$$

Table (A3) lists the indicative values of efficiency η_d for the different types of gearboxes.

c) After required power P_{r1} and output speed n_2 are known, locate the gearmotor rating charts and select the one relevant to normalized power P_n equal to or greater than P_{r1} :

$$P_n \geq P_{r1} \quad (11)$$

Unless otherwise specified, power P_n listed in the motor rating chart refers to continuous duty S1. For motors operating in conditions other than S1, determine type of duty according to CEI 2-3/IEC 60034-1 standards.

Note that for duty cycles from S2 to S8 and motor frame sizes up to 132 included, power may be upgraded over that specified for continuous duty. In this event, the condition to be verified is the following:

$$P_n = \frac{P_{r1}}{f_m} \quad (12)$$

The adjusting factor f_m can be obtained from table (A5).

(A 5)	DUTY						Please contact us	
	S2			S3*				
	Cycle duration			Cyclic duration factor				
	10	30	60	25%	40%	60%		
f_m	1.35	1.15	1.05	1.25	1.15	1.1		

* Cycle time must be equal to or less than 10 minutes. Should this not be the case contact our Technical Service for assistance.

Cyclic duration rate: see formula (25).

For the output speed n_2 , or closest to, select the gearmotor that yields a service factor f_s meeting the following condition:

$$f_s \geq f_s' \quad (13)$$

In case of **FP** configuration, please see Verification paragraph (chapter 14.5 - item g) .

14.3 METHOD B (Gearbox selection by Torque requested by application)

Based on application type, it should be defined :

a) Required service factor f_s' (see tab A4);

b) Determine calculated torque according to required output torque M_{r2} as follows:

$$M_{c2} = M_{r2} \times f_s' \quad (14)$$

c) Determine gear ratio from required output speed n_2 and drive speed n_1 :

$$i = \frac{n_1}{n_2} \quad (15)$$

d) Once M_{c2} and i are determined, locate the gearbox rating chart for the drive speed n_1 and select a gearbox featuring the ratio i nearest to calculated ratio that also satisfies the condition:

$$M_{n2} \geq M_{c2} \quad (16)$$

If a IEC-normalised motor is to be fitted onto the gearbox, check availability of the applicable adapter.

In case of **FP** configuration, please see Verification paragraph (chapter 14.5 - item g) .

14.4 METHOD C (Gearbox selection by number of working cycles)

a) Determine the following according to the required application:

- Required service factor f_s' (see tab. A4)
- required gearbox working life h
- required drive unit (hydraulic, electric or others).

b) Define the calculated torque with the required output torque M_{r2} :

$$M_{c2} = M_{r2} \times f_s' \quad (17)$$

c) Calculate the life factor with required working life h and output speed n_2 :

$$Fh_2 = (n_2 \times h) \quad (18)$$

d) Calculate the required reduction ratio:

$$i = \frac{n_1}{n_2} \quad (19)$$

e) Select gearbox size which, having a reduction ratio close to the calculated value, which satisfies the following

$$M_{c2} \leq M_{n2} \quad (20)$$

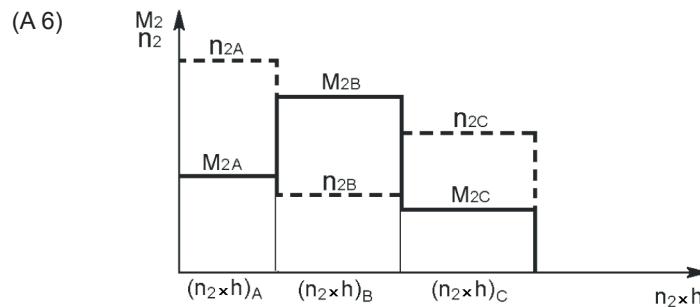

$$Fh_2 \leq (n_2 \times h) \quad (21)$$

where M_{n2} and Fh_2 are indicated in the tables on technical features for each gearbox size.

In case of applications in which the required torque M_{r2} and speed n_2 vary within a wide range, best selection could be an equivalent required torque given by:

$$M_{r2} = \sqrt[4]{\frac{(n_2 \times h)_A \times M_A^4 + (n_2 \times h)_B \times M_B^4 + (n_2 \times h)_C \times M_C^4 + \dots}{(n_2 \times h)_A + (n_2 \times h)_B + (n_2 \times h)_C + \dots}} \quad (22)$$

referred to:

and calculating the life factor Fh with:

$$Fh_{\text{calc}} = (n_2 \times h)_A + (n_2 \times h)_B + (n_2 \times h)_C + \dots \quad (23)$$

Then follow the same procedure as specified in d) and e).

In case of **FP** configuration, please see Verification paragraph (chapter 14.5 - item g).

14.5 VERIFICATION

After selecting the drive units, please check the following:

a) Thermal power

Make sure that the thermal capacity of the gearbox is equal to or greater than the mechanical power required by the application, as per equation (24).

If this is not the case provide a supplementary cooling system or select a larger gearbox.

When the duty cycle is formed by short operating periods and rest time is long enough for the unit to cool down, the thermal capacity is hardly significant and it may be omitted from calculation.

For ambient temperatures other than 20°C, intermittent duty and drive speed n_1 other than the reference speed listed in the rating charts, P_t is to be adjusted through thermal factor f_t and/or speed factor f_v as listed in table (A7).

Finally, make sure that the following condition is always satisfied:

$$P_{r1} \leq P_t \times f_t \times f_v \quad (24)$$

(A 7)

t_a max. [°C]	Continuous duty	f_t			
		Intermittent duty			
		80	60	40	20
10	1.2	1.3	1.6	1.8	2.0
20	1.0	1.1	1.3	1.5	1.7
30	0.9	1.0	1.2	1.3	1.5
40	0.7	0.8	0.9	1.0	1.2
50	0.5	0.6	0.7	0.8	0.9

n_1	f_v
500	1.35
900	1.2
1500	1.0
1800	0.85

Cyclic duration factor is the relationship of operating time under load t_f to total cycle time ($t_f + t_r$, where t_r stands for time at rest), expressed as a percentage.

$$I = \frac{t_f}{t_f + t_r} \times 100 \quad (25)$$

Should the gear unit in the conventional configuration fall short of thermal capacity and not verify the condition (24) above, it is recommended that the fan cooled input shaft - ordering code FV__ is specified instead. The relevant thermal capacity is listed in the charts here after.

* @ $n_1 = 1150$ min $^{-1}$ **NOTE: The thermal power values indicated in the selection charts for each size apply to the versions without negative multidisc brake.****For the versions fitted with brakes, please contact our sales organization.**

b) Supplementary cooling systems

In the event transmitted mechanical power is higher than transmissible thermal power (see tables of gearbox specifications), gearboxes are available complete with a cooling system.

These separate cooling systems are made up of an air-oil heat exchanger, a motor pump, a filter for warm oil and an electric system that incorporates an overload cutout for electric motors. A special feature of these cooling systems is their low noise.

Technical data

(A 9)

		CR1	CR2	CR3
Power absorbtion	[kW]	0.55	0.75	1.1
Pumpflow	[l/min]	13	22	34
Air flow	[m³/h]	850	1500	2000
Noise level at 1 mt.	[dB(A)]	68	70	75
Weight	[kg]	24	36	58

Selection criteria

Power P to be transmitted is known. Once you have determined that it is higher than thermal power P_t , calculate excess power P_s using this formula:

$$P_s = 0.1 \times (P - P_t) \quad (26)$$

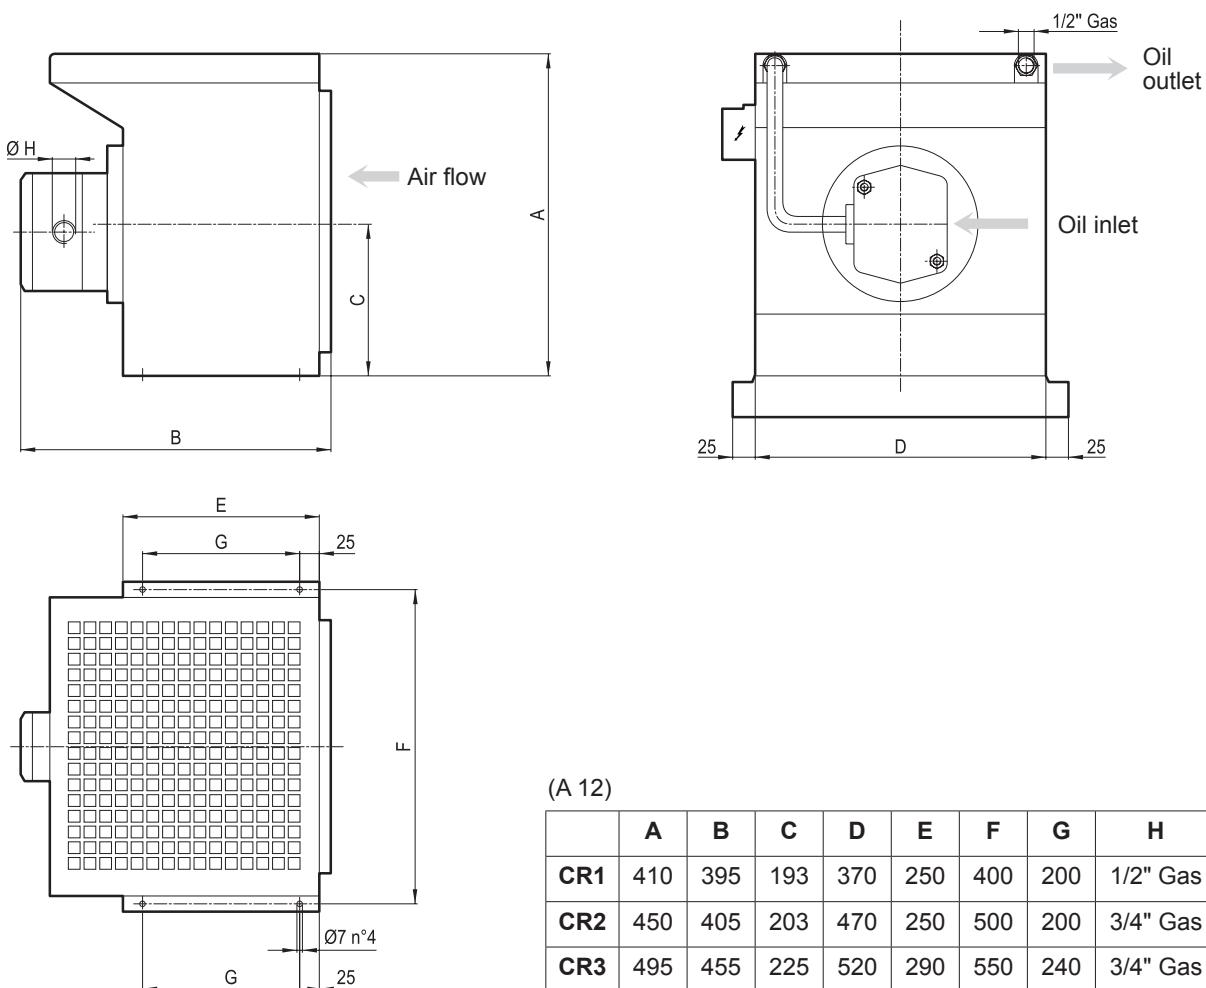

Select cooling system size in chart (A10) according to ambient temperature ta ($20^\circ - 40^\circ C$). Check that the cooling system you have selected will fit the gearbox (see table A11). If this is not the case, contact our sales organization.

(A 11)

321	CR3	CR2	CR2	CR2	—	—	—

Dimensions

c) Maximum torque

Make sure that neither the momentary peak torque nor the starting torque under load ever exceed the $M_{2\max}$ value that the gearbox is rated for (see figure A2).

d) Radial loads

Examine the application and establish:

- overhung load applying to input and/or output shaft through the following formula:

$$R_{c1-2} = \frac{2000 \times M_{r1-2} \times K_r}{d} \quad (27)$$

R_{c1-2} = overhung load [N]

1 = for input shaft

2 = for output shaft

M_{r1-2} = Torque at the shaft [Nm]

d = P.C.D [mm] of transmission element (sprocket, gear, pulley, etc.)

$K_r = 1$ chain transmission

$K_r = 1.25$ gear transmission

$K_r = 1.5-2.5$ V-belt transmission

- Define the thrust load position X onto shaft. Check this value with the chart indicating the load R_{x1-2} bearable by the gearbox. Check that the following is satisfied:

$$R_{c1-2} \leq R_{x1-2} \times f_{h1-2} \quad (28)$$

where f_{h1-2} are the radial and thrust load corrective factor depending on the required life factor Fh_1 and Fh_2 (refers to radial and thrust loads in the "Dimensions" chapter).

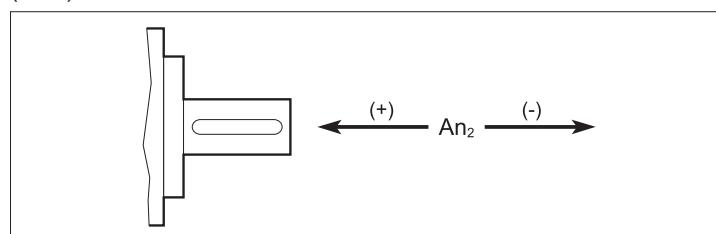

e) Thrust loads

Check the thrust load, when exerted onto the output shaft, as specified for the radial load.

The following should be satisfied:

$$\pm A_{c2} \leq \pm A_{n2} \times f_{h2} \quad (29)$$

(A 13)

where f_{h2} are the radial and thrust load corrective factor depending on the required life factor Fh_2 (refers to radial and thrust loads in the "Dimensions" chapter).

When a thrust load is combined with an axial load contact our Sales Dept. for a proper checking procedure.

f) VK output

Determine:

- Radial load R_{c2}
- Thrust load A_{c2}
- Offset x of load R_{c2}

Look up the diagram relevant to the gearbox under study and identify permitted radial load R_{x2} corresponding to distance X and the ratio A_{n2}/R_{n2} nearest to value A_{c2}/R_{c2} .

Make sure the following equation is verified:

$$R_{x2} \geq R_{c2} \quad (30)$$

Values in the diagram refer to:

- $n_2 = 10$ rpm
- 10000 hrs theoretical lifetime

For different output speed n_2 , or lifetime expectancy, consider:

- a speed factor f_{n2} as per table (A14):

(A 14)

n_2	1	2.5	5	10	15	25	50	100
f_{n2}	2.0	1.51	1.23	1.00	0.88	0.76	0.62	0.50

- a lifetime factor f_L according to table (A15).

(A 15)

Lifetime	2500 h	5000 h	10000 h	15000 h	25000 h	50000 h	100000 h	100
f_L	0.66	0.81	1.00	1.13	1.32	1.62	2.00	0.50

This condition must be verified:

$$R_{x2} \times f_{n2} \geq R_{c2} \times f_L \quad (31)$$

g) FP output (FDK and FZP when and if available)

On shaft-mounted installations, gearmotors produce a reaction force due to fixing position and motor weight and/or external loads from other connection elements.

These forces combination is added to normal load condition and will influence :

- bearings life
- output shaft resistance
- flange tightening condition

In the event that there is an additional load (like a large size electric motor) and /or a single stage gearbox (with particular attention to sizes from 300 to 307), it's recommended to contact our Technical Service.

For the specific reaction loads due to fixing position, in the dimensional section for each size are reported the minimum length for torque reaction arms (single or double) that can reach the rated performances.

14.6 HOW TO SELECT THE MOTOR

14.6.1 Electric motor (see section M in this catalogue)

a) n_2 and dynamic efficiency η_d are known, calculate input power based on torque M_{r2} as follows

$$P_{r1} = \frac{M_{r2} \times n_2}{9550 \times \eta_d} \quad [\text{kW}] \quad (32)$$

Table (A3) reports the values of efficiency η_d related to the different reduction stages of the gearboxes of series 300.

b) Look up the motor selection charts and select a size with such rated power to satisfy this condition:

$$P_{r1} \leq P_n \quad (33)$$

4-pole motors and over should be preferred.

Unless otherwise specified, power P_n of motors indicated in the catalogue refers to continuous duty S1. For motors used in conditions other than S1, the type of duty required by reference to CEI 2-3/IEC 34-1 Standards must be mentioned.

For duties from S2 to S8 in particular and for motor frame 132 or smaller, extra power can be obtained with respect to continuous duty power, consequently the following condition must be satisfied:

$$\frac{P_{r1}}{f_m} \leq P_n \quad (34)$$

The increased power factor f_m can be obtained from table (A5).

For duties other than S1 with considerable number of starts per hour, factor Z must be considered (it is ascertained by using the information in the motors chapter). Factor Z defines the maximum number of starts for the application under consideration.

14.6.2 Hydraulic motor (see section H in this catalogue)

Determine hydraulic motor type according to the application, choosing from the options given in guidance table (A16).

(A 16)

Duty	Light		Medium		Heavy	
Pressure p [bar]	<175		175 - 200		200 - 450	
Motor design	orbital 	gear motor 	radial piston 	axial piston 	cam motor 	axial piston
Speed	medium ≤ 700	high ≤ 3000	medium ≤ 500	high ≤ 4000	low ≤ 200	medium ≤ 4000
η _{mh}	0.80	0.85	0.95	0.93	0.93	0.93
η _v	0.90	0.87	0.95	0.95	0.95	0.95

Based on the specifications of gearbox input:

- input torque M_{r1} [Nm]
- input speed n_1 [min⁻¹]

and on allowed pressure p [bar] for the hydraulic circuit, calculate the displacement of the hydraulic motor by formula:

$$V_c = \frac{20 \times p \times M_{r1}}{\eta_{mh}} \text{ [cm}^3\text{]} \quad (35)$$

where η_{mh} is the hydraulic mechanical efficiency of the motor (tab. A16).

Select a motor size with displacement V that satisfies the following condition:

$$V_c \leq V \quad (36)$$

Calculate the flow required for the hydraulic motor

$$Q_1 = \frac{V \times n_1}{\eta_v \times 1000} \text{ [l/min]} \quad (37)$$

where η_v is volumetric efficiency.

For hydraulic orbital motors by BONFIGLIOLI TRASMITAL, please see section H in this catalogue. For other types of hydraulic motors, see the relevant technical literature.

15 INSTALLATION

Observing a few rules for correct installation is essential to the reliable and proper operation of the gearbox.

The rules set out here are intended as a preliminary guide to selecting gearbox.

For effective and proper installation, follow the instructions given in the Installation, use and maintenance manual available from our Sales network.

Following is a brief outline of installation rules:

a) Fastening:

- Place the gearbox on a surface providing adequate rigidity. Mating surfaces should be machined and flat.
- This applies especially to flange-mounted gearboxes with splined hollow output shafts (refer to the Installation, Operation and Maintenance Manual available on www.bonfiglioli.com).
- In applications that involve high radial loads at the output end, flange mounting is recommended for some gearboxes as this mounting pattern benefits from the double pilot diameters provided on these gearboxes (refer to the Installation, Operation and Maintenance Manual available on www.bonfiglioli.com).
- Make sure the gearbox is suitable for the required mounting position.

– Use bolts specified in Use and Maintenance Manual (available on www.bonfiglioli.com) and tighten the bolts to the rated values specified in the relevant charts.

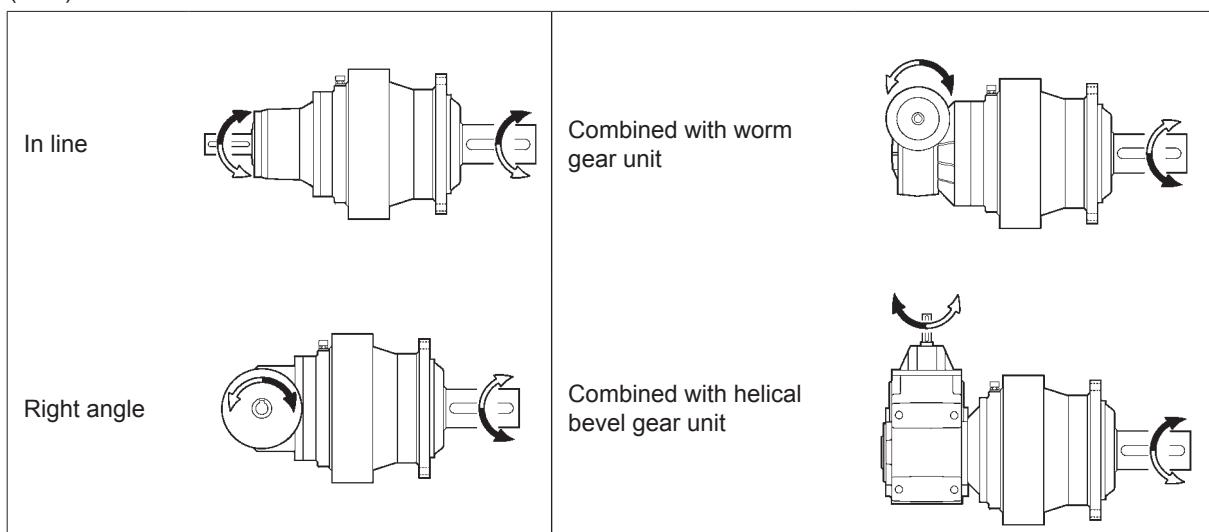

b) Connections

– When fitting transmission elements onto the gearbox do not tap them with hammers or similar tools. To slide these parts in, use the service screws and tappings provided at the shaft ends. Be sure to clean off any grease or rust preventative from the shafts before fitting any parts.

– Direction of rotation

Before wiring the motor please note the input/output shaft arrangement, as described in the diagram here after:

(A 17)

RA/RO: For the monodirectional applications or for the applications requiring a sense of rotation prevailing on that opposite to it, the selection of "RA/RO" option ensures the declared performance.

For applications not requiring a prevailing sense of rotation with respect to each other, the performances are guaranteed regardless of the selected "RA/RO" option.

c) Paint coating

– Use paint compatible with the primer applied to the gearbox, see "Supply conditions".

Prior to painting, tape the seal rings installed on the shafts. Contact with the solvent may damage the seals with subsequent oil leakage.

d) Lubrication

– Prior to commissioning, fill the gearbox with the recommended type and quantity of oil (refer to the Installation, Operation and Maintenance Manual available on www.bonfiglioli.com).

The level is to be checked through the appropriate plug, or sight glass, each gearbox is provided with, and located according to the mounting position originally specified.

NOTE: Combined gearboxes feature separate lubrication for planetary stages and for worm gears (series 3/V) or bevel helical units (series 3/A).

The operations described above are not to be performed with life-lubed gearboxes, that are factory filled with synthetic oil.

16 LUBRICATION

Refer to the User's Manual available at www.bonfiglioli.com for indications about checking the oil level and its replacement.

Do not mix mineral oils with synthetic oils and/or different brands.

However, oil level should be checked at regular intervals and topped up as required.

Check monthly if unit operates under intermittent duty, more frequently if duty is continuous.

16.1 Selection of the optimal oil viscosity (data relating to Shell Oils)

		Operating ambient temperature [C°]																		
		-40	-35	-30	-25	-20	-15	-10	-5	0	+5	+10	+15	+20	+25	+30	+35	+40	+45	+50

Recommended operating limits

Allowed operating limits.

Forbidden operating limits.

* = It is recommended to ramp-up and to provide for greater absorption of the motor.

If needed and in the event of impulse loads, contact Bonfiglioli Technical Service.

16.2 Lubrication for 300 series gearboxes

All gearboxes are oil-bath lubricated. For applications calling for gearboxes with a vertically positioned axis, in which oil coverage during operation would not be sufficient to ensure correct lubrication of upper bearings, suitable life lubrication systems are used.

Before start-up, fill the gearbox with the correct quantity of oil, selecting the viscosity level as per table (A10). These gearboxes are provided with oil filling, level and drain plugs.

Prior to starting-up, fill the gearbox with the appropriate quantity of oil.

Gearboxes are generally provided with oil fill, level and drain plugs. As such, the mounting position needs always to be specified when ordering the gearbox.

For the reference charts of oil plugs placement and quantity of lubricant, refer to the Installation, Operation and Maintenance Manual (available on www.bonfiglioli.com).

- Note: For applications with non-routine operating conditions, consult factory with complete information.
- Unless otherwise specified, gear units are supplied unlubricated. Primary gear units belonging to 3/V and 3/A combinations instead may be supplied factory filled with long-life synthetic lubricant, depending on their frame size, as indicated in the Use and Maintenance Manual (available at www.bonfiglioli.com).
- The oil capacities listed for the various types of unit are indicative only. Fill the gearbox up to the level plug, located as per the mounting position specified when ordering to ensure the gearbox is properly filled.
- Should transmitted power exceed the thermal capacity of the unit a supplementary cooling unit must be provided (see: Supplementary cooling systems).

NOTE: Combined gearboxes and gearmotors feature separate lubrication for planetary stages and for worm gearboxes (3/V) or helical bevel units (3/A).

16.3 Brakes lubrication

The hydraulically operated multidisc brakes are lubricated by the same oil as the gearbox.

17 STORAGE

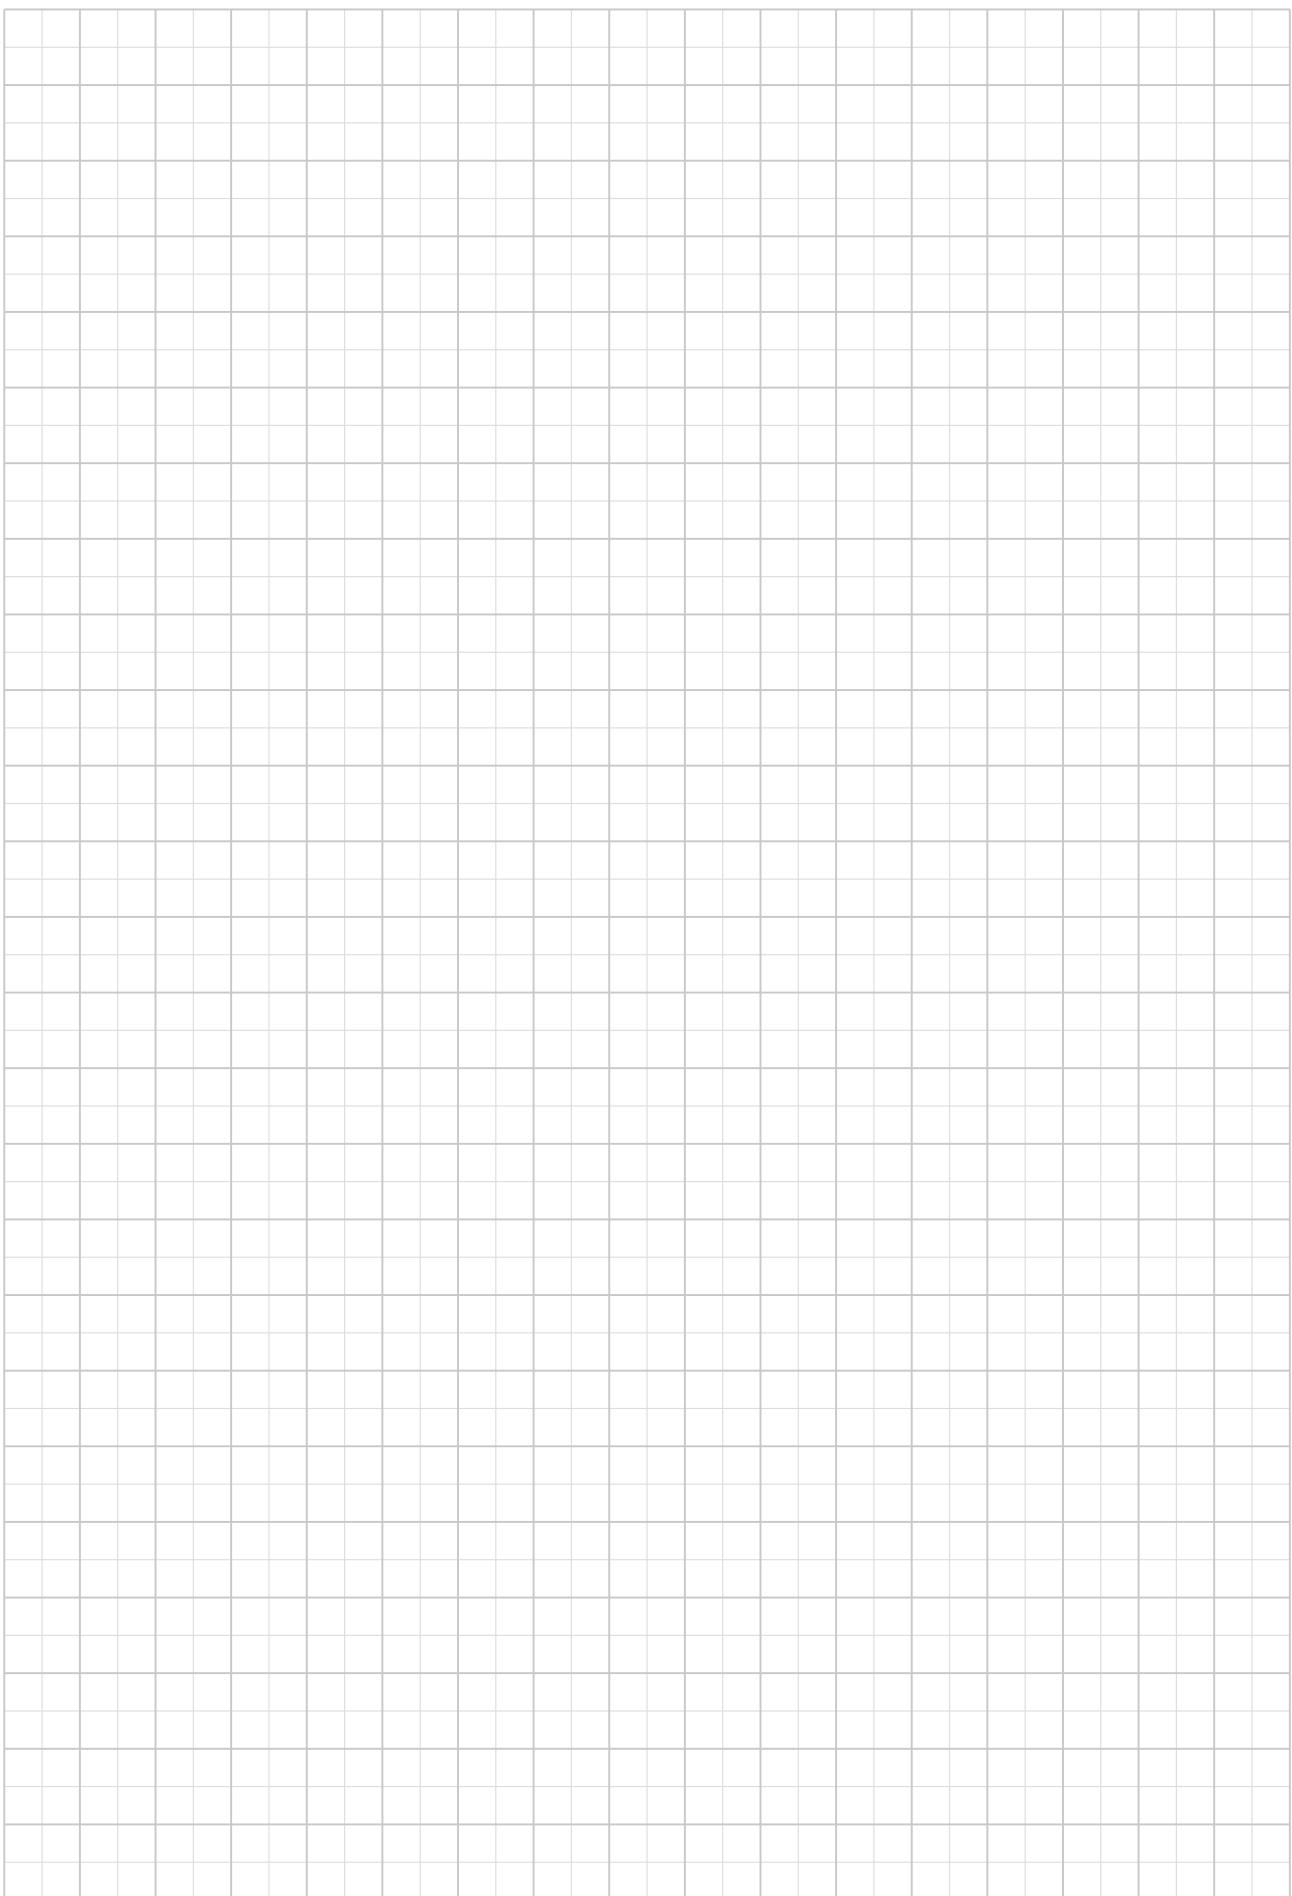

Observe the following instructions to ensure correct storage of delivered products:

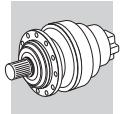

- a) Do not store outdoors, in areas exposed to weather or with excessive humidity.
- b) Always place boards, wood, or other material between the products and the floor. The gearbox should not have direct contact with the floor.
- c) For storage periods of over 60 days, all machined surfaces such as flanges, shafts and couplings must be protected with a suitable anti-oxidation product.
- d) When units are expected to be in storage for more than 6 months, the following extra measures are required:
 - Smear all machined parts with grease to prevent oxidation.
 - Place the gearbox so that the breather plug is uppermost and fill it with oil (this does not apply to life-lubricated gearboxes). Before the gearbox is put into operation, the appropriate type and quantity of oil should be restored.

18 SUPPLY CONDITIONS

Gearboxes are supplied as follows:

- a) arranged for installation in the mounting position specified in the purchase order;
- b) Unlubricated. Inner parts are protected by a film of the oil used for testing purpose;
- c) when no specific protection class is requested, the surfaces of gearboxes are protected to at least corrosivity class C2 (UNI EN ISO 12944-2), realized with a grey antioxidant water-based primer Ral 7042. Mating surface are not coated .
- d) tested to factory specifications;
- e) suitably packed;
- f) complete with mounting hardware for IEC electric or hydraulic motors;
- g) gearboxes lubricated "for life" are factory filled with oil.

23 ADDITIONAL OPTIONS

23.1 SURFACE PROTECTION

When no specific protection class is requested, the surfaces of gearboxes are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with C3 and C4 surface protection, obtained by painting the complete gearbox.

SURFACE PROTECTION	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
C3	Urban and industrial environments with up to 100% relative humidity (medium air pollution)	120°C	C3
C4	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

Gearboxes with optional protection to class C3 or C4 are available in a choice of colours. If no specific colour is requested (see the "PAINTING" option) gearboxes are finished in RAL 7042. Gearboxes can also be supplied with surface protection for corrosivity class C5 according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

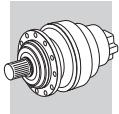

23.2 PAINTING

Gearboxes with optional protection to class C3 or C4 are available in the colours listed in the following table.

PAINTING	Colour	RAL number
RAL7042*	Traffic Grey A	7042
RAL5010	Gentian Blue	5010
RAL9005	Jet Black	9005
RAL9006	White Aluminium	9006
RAL9010	Pure White	9010

* Gearboxes are supplied in this standard colour if no other colour is specified.

NOTE – "PAINTING" options can only be specified in conjunction with "SURFACE PROTECTION" options.

23.3 CERTIFICATES

AC - Certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

CC - Inspection certificate

The document entails checking on order compliance, the visual inspection of external conditions and of mating dimensions. Checking on main functional parameters in unloaded conditions is also performed along with oil seal proofing, both in static and in running conditions. Units inspected are sampled within the shipping batch and marked individually.

23.4 TACONITE SEALS

Taconite seals are recommended for environments characterised by the presence of abrasive dust or powders. Taconite seals incorporate a combination of sealing rings, labyrinth and a grease chamber. This option is available for **FP** and **FZ** version from size 314 to 325.

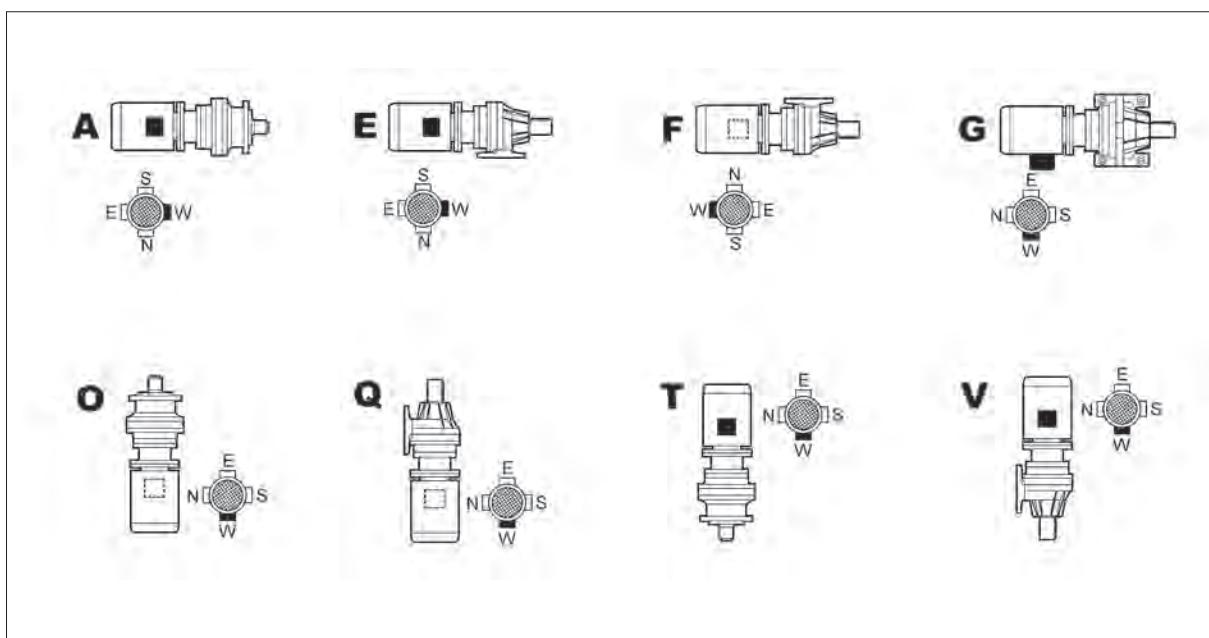

For detailed information please contact our Technical Service.

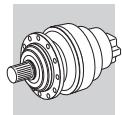

24 MOUNTING POSITION

The product designation is only complete when the mounting position is also specified. Please refer to table (A18) for in-line gear units and to (A19) for right angle drives.

i The selection of motors without brake takes into account the requirements of Regulation EC 640/2009 (see section **M** of this catalogue). When the motor rated power is below 0.75kW, BN/M motors can be provided.

Considering that the Regulation EC 640/2009 shall not apply to the motors equipped with brake, the brakemotor selection takes into account BN/M motors only, without taking into account the rated power. BX, BE, MX and ME brakemotors are available on request.

A

1 Power applied at gearbox input shaft

2 Gearbox output speed

Torque delivered at output shaft:

- 3**
- specified service factor
 - 10000 h theoretical lifetime

4 Service factor

5 Gear ratio

6 Gearbox thermal capacity

7 Model and frame size of combined planetary
+ worm gear unit

8 Model and frame size of combined planetary
+ helical bevel gear unit

9 IEC motor size and pole number

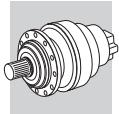

10 Compact motor size and pole number

Permitted overhung loading on output shaft,
based on:

- 11**
- service factor f_S=1
 - 10000 h theoretical lifetime
 - speed of output n₂

For forces not applied at shaft middlepoint,
see diagrams provided in the specific gearbox
overall dimensioning pages

12 Dimensions page. Gearmotor overall
dimensions refer to matches with
BONFIGLIOLI motors only

The selection of motors without brake takes into account the requirements of Regulation EC 640/2009 (see section **M** of this catalogue). When the motor rated power is below 0.75kW, BN/M motors can be provided.

Considering that the Regulation EC 640/2009 shall not apply to the motors equipped with brake, the brakemotor selection takes into account BN/M motors only, without taking into account the rated power. BX, BE, MX and ME brakemotors are available on request.

25.3 RATING CHARTS FOR INLINE UNITS 300 L

Reading the rating chart.

The rated torque of the gearbox, independent of installed mechanical power

1 Reference torque

2 Gearbox drive speed

3 Frame size of the in-line gear unit

4 Gear ratio

5 Gearbox output speed

Gearbox rated output torque based on:

6 - service factor f_S=1
- 10000 h theoretical lifetime

Gearbox rated input power, based on:

7 - service factor f_S=1
- 10000 h theoretical lifetime

8 Gearbox thermal capacity

9 Frame size of available IEC motor

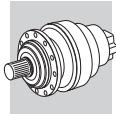

Permitted overhung loading on output shaft,
based on:

10 - service factor f_S=1
- 10000 h theoretical lifetime
- speed of output n₂

For forces not applied at shaft middlepoint,
see diagrams provided in the specific gearbox
overall dimensioning pages

11 Maximum torque

The rated torque of the gearbox, independent of installed mechanical power

1 Reference torque

2 Gearbox drive speed

Frame size of the right-angle gear unit.

3 NOTE: letters (B) (C) near size indication identify different angle reduction dimensions. See dimensions pages.

4 Gear ratio

5 Gearbox output speed

Gearbox rated output torque based on:

6 - service factor $f_s=1$
- 10000 h theoretical lifetime

Gearbox rated input power, based on:

7 - service factor $f_s=1$
- 10000 h theoretical lifetime

8 Gearbox thermal capacity

9 Frame size of available IEC motor

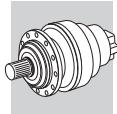

Permitted overhung loading on output shaft, based on:

10 - service factor $f_s=1$
- 10000 h theoretical lifetime
- speed of output n_2

For forces not applied at shaft middlepoint, see diagrams provided in the specific gearbox overall dimensioning pages

11 Maximum torque

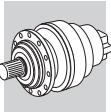

12 Dimensions page

1 Reference torque

2 Gearbox drive speed

3 Frame size of combined worm
+ planetary gearbox

4 Gear ratio

5 Gearbox output speed

Gearbox rated output torque based on:

6 - service factor $f_S=1$
- 10000 h theoretical lifetime

Gearbox rated input power, based on:

7 - service factor $f_S=1$
- 10000 h theoretical lifetime

8 Gearbox thermal capacity

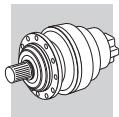

9 Frame size of compatible IEC electric motor
- IEC inputs marked with * feature a lowered key.

Permitted overhung loading on output shaft,
based on:

- service factor $f_S=1$
- 10000 h theoretical lifetime
10 - speed of output n_2

For forces not applied at shaft middlepoint,
see diagrams provided in the specific gearbox
overall dimensioning pages

11 Dimensions page

B

25.6 3/A - COMBINED UNITS RATING CHARTS

Reading the rating chart.

1 Reference torque

2 Gearbox drive speed

3 Frame size of combined planetary + bevel helical unit

4 Gear ratio

5 Gearbox output speed

Gearbox rated output torque based on:

- 6 - service factor f_S=1
- 10000 h theoretical lifetime

Gearbox rated input power, based on:

- 7 - service factor f_S=1
- 10000 h theoretical lifetime

8 Gearbox thermal capacity

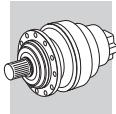

9 Frame size of available IEC motor

Permitted overhung loading on output shaft, based on:

- service factor f_S=1
- 10000 h theoretical lifetime
- speed of output n₂

For forces not applied at shaft middlepoint, see diagrams provided in the specific gearbox overall dimensioning pages

11 Dimensions page

25.7 RATING CHARTS FOR INLINE UNITS 300 L

Reading the rating chart.

1 Reference torque

2 Number of reduction stages (in-line gear unit)

3 Gear ratio

Gearbox rated output torque based on:

4 - service factor $f_S=1$
- $n_2 \cdot h$ indicated

5 Maximum power transmitted to input shaft

6 Gearbox thermal capacity

7 Input angular velocity

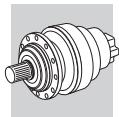

8 Maximum input angular velocity

9 Rated brake torque (Hydraulic brake)

10 Negative multidisc hydraulic brake

11 Maximum output torque at gearbox

12 Page where dimensions can be sorted from

25.8 RATING CHARTS FOR RIGHT ANGLE UNITS 300 R

Reading the rating chart.

1 Reference torque

2 Number of reduction stages (right-angled gear unit)

3 Gear ratio

Gearbox rated output torque based on:

4 - service factor f_S=1
- n₂·h indicated

5 Maximum power transmitted to the input shaft

6 Gearbox thermal capacity

7 Input angular velocity

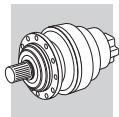

8 Maximum input angular velocity

9 Rated brake torque (Hydraulic brake)

10 Negative multidisc hydraulic brake

11 Maximum output torque at gearbox

12 Page where dimensions can be sorted from

303 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

304 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

305 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

306 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

310 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

314 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

315 VK

The diagram below allows the calculation of permitted overhung load R_{x2} on the output shaft of gearbox, with radial force applying at a distance x from shaft shoulder.

The curves are relevant to value resulting from the relationship of trust load A_{n2} to radial load R_{n2} , based on $n_2 = 10 \text{ min}^{-1}$ and 10000 hrs theoretical lifetime.

NEGATIVE MULTIDISC BRAKE AND HYDRAULIC MOTORS

H1 SYMBOLS AND UNITS OF MEASURE

Symbols	Units of Measure	Description	Symbols	Units of Measure	Description
V	[cm ³]	Rot. displacement	ηv		Volumetric efficiency
p	[bar]	Pressure	n	[min ⁻¹]	Angular speed
pA, pB	[bar]	Pressure in A and B connections	M	[Nm]	Actual torque onto the motor shaft
Q	[l/min]	Flow rate	cont		General value, for continuous duty
ηt		Efficiency	int		General value, intermittent duty
ηmh		Hydraulic-mechanical efficiency			

H2 NEGATIVE MULTIDISC BRAKE

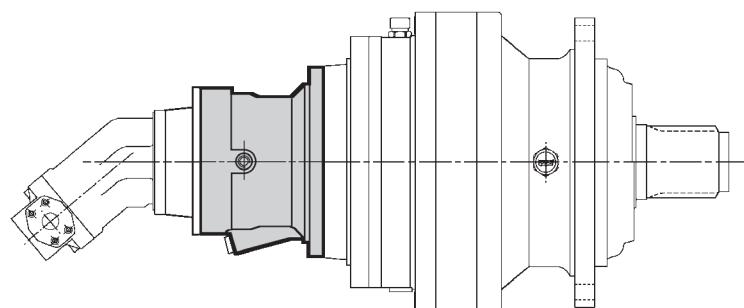

DESCRIPTION

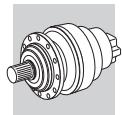

TRASMITAL's fail-safe parking brake is an oil immersed multidisc unit on the input side of the gearbox. The brake is operated when there is no hydraulic pressure and is released when the minimum release pressure is applied.

Use of parking brake is necessary whenever the driven system must be kept at standstill even under external forces and/or torques.

Applications:

- winches
- slewing drives
- parking brake on mobile equipment
- general industrial applications

H4 HYDRAULIC MOTORS

GENERAL FEATURES

Gearboxes belonging to the series 300 can be supplied complete with MG hydraulic motors manufactured by BONFIGLIOLI TRASMITAL. These motors were designed to provide compact and energy efficient gearmotors.

Before ordering, you should consult with the Technical Service Bonfiglioli.

H4.1 MG hydraulic motors

Design characteristics:

- Orbit system with GEROLER® rollers between rotor and stator
- Distributor on output shaft
- Displacements from 50 to 250 cm³
- Max. pressure 175 bar
- Max. flow rate 48 lt/min
- High efficiency
- Hydraulic brake can be included in the motor overall dimensions
- Inner brake directly controlled by the motor with no valves or outer circuits required.

H5 TECHNICAL FEATURES

H5.1 Displacement V [cm³]

Geometrical volume produced as a result of each motor rotation corresponding to the theoretical volume of hydraulic oil necessary for a rotation of the driving shaft

H5.2 Pressure p [bar]

Hydraulic pressure applied to the motor when running.

H5.3 Flow rate Q [l / min]

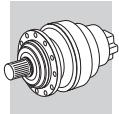

Hydraulic oil flow through the motor when running.

H5.4 Efficiency η_t

Total efficiency of the hydraulic motor given by:

$$\eta_t = \eta_{mh} \times \eta_V$$

(38)

H5.5 Mechanical-hydraulic efficiency η_{mh}

This is the ratio of actual torque to theoretical torque at the driving shaft. Value depending on inner losses due to mechanical friction as well as hydraulic fluid pressure losses, calculated as follows:

$$\eta_{mh} = \frac{2\pi \times 10 \times M}{(pA - pB) \times V} \quad (39)$$

H5.6 Hydraulic efficiency η_v

This is the ratio of motor actual speed to motor theoretical speed. Value depending on the motor inner blow-by between high and low pressure volumes. This value is given by the following formula:

$$\eta_v = \frac{n \times V}{Q \times 1000} \quad (40)$$

H5.7 Angular speed n [min⁻¹]

Hydraulic motor rotation speed. Value resulting from the following formula:

$$n = \frac{Q \times 1000}{V} \times \eta_v \quad (41)$$

H5.8 Torque M [Nm]

Actual torque transmitted by the hydraulic motor. Value given by the following formula:

$$M = \frac{(pA - pB) \times V}{2\pi \times 10} \times \eta_{mh} \quad (42)$$

ORBIT MOTOR TYPE MG

H7 DISPLACEMENT SELECTION

Displacement V of the hydraulic motor should be selected together with the gearbox.

Once the output torque and speed n_2 for the gearbox M_{r2} is known, proceed as follows:

Define the control pressure value $p_A - p_B \leq 175$ bar for the motor.

Calculate the gearbox displacement value called V_{eq} with the following formula:

$$V_{eq} = \frac{2\pi \times 10 \times M_{r2}}{(p_A - p_B) \times \eta_{mh} \times \eta_d} \text{ [cm}^3\text{]} \quad (43)$$

where η_{mh} , for example, is equal to 0.85;

η_d : gearbox dynamic efficiency, consider 0.94.

Calculate the value for flow rate Q, necessary for feeding the hydraulic motor, with the following formula:

$$Q = \frac{n_2 \times V_{eq}}{1000 \times \eta_v} \text{ [l/min]} \quad (44)$$

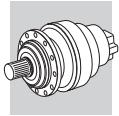

where η_v , for example, is equal to 0.90.

- Select the gearbox size with M_{r2} and n_2 .
- Look up the diagram (A23) for the gearmotor with equivalent displacement value V_{eq} and select:
 - a motor that fulfils the p int. and Q requirements and at the same time.
 - the indicative value of reduction ratio i. Please consider that ratio should be obtained with as few reduction stages as possible, to save on gearmotor costs and contain dimensions.

Once you have determined the value of M_2 and the indicative value of i, select the gearbox and check your selection as indicated in chapt. 14.5.

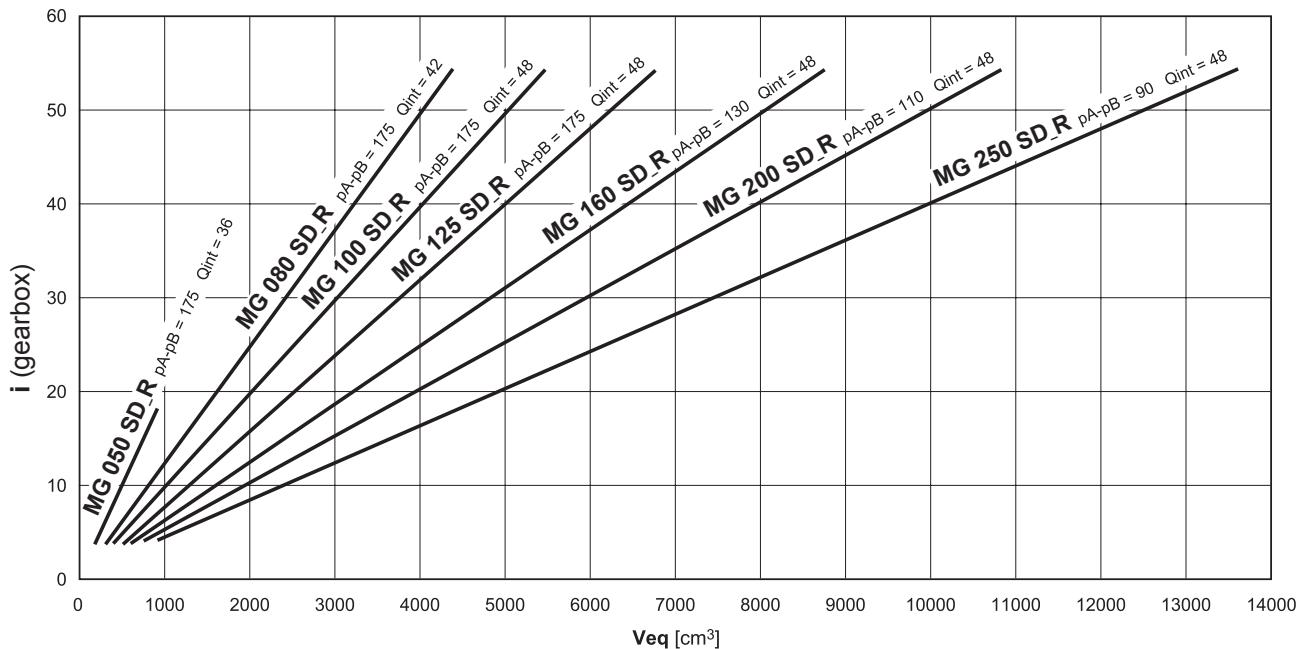

H8 CHECKING

Check that pressure, efficiency and flow rate values correspond with values indicated in Table (A24 and A25) on motor technical features.

H12 INSTALLATION

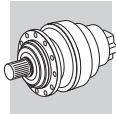

Further to standards on gearbox installation, refer to chapter 15, comply with the following hydraulic motor installation instructions.

a) Connection to the hydraulic circuit

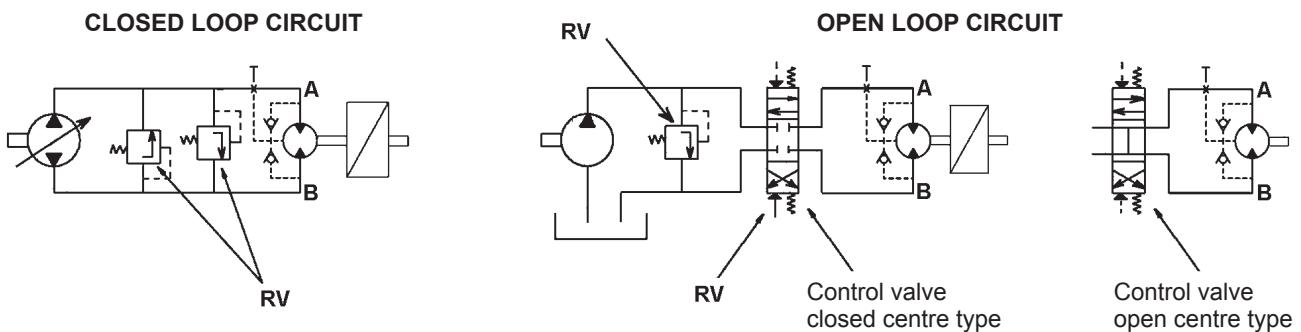

Motors can be connected either to closed or open circuits.

In case of an open circuit, solenoid valve or control distributor can be of the closed or open center type.

The hydraulic motor delivery side should always have a max. pressure valve set to a value not exceeding the p_{int} value allowed for the hydraulic motor. See hydraulic diagrams (A29).

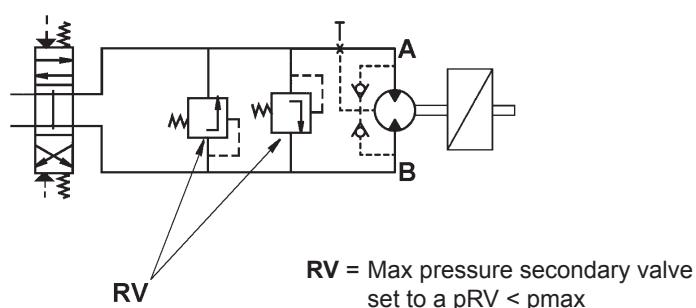

(A 29)

RV = Max pressure valve set to a pRV < pmax

If not possible, because the circuits control other devices needing a higher pressure and/or a closed center control valve is fitted and the motor controls parts with a high moment of inertia, max. pressure secondary valves should be as close as possible to the motor. See diagram (A30).

(A 30)

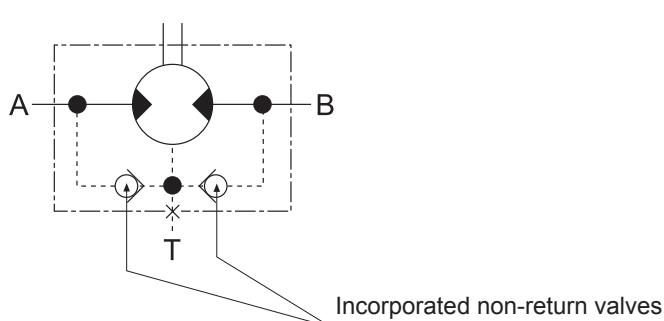

b) Connecting drain port T

These motors have a 1/8" G drain hole in the centre of the cover. The motor is supplied with the port closed by a metal plug (see figure below).

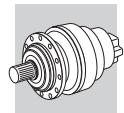

Two non-return valves are incorporated in the motor casing to maintain internal pressure at the same level as the low pressure line A or B if the drain port is not connected to the tank.

(A 31)

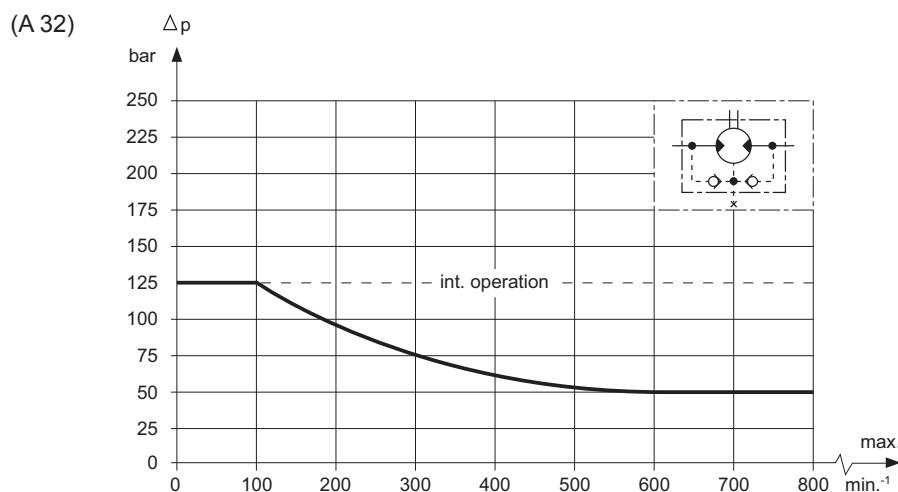

1) If the drain port is connected up, pressure at the shaft seal is always equal to the pressure in the drain line.

2) If the drain port is closed off, pressure at the shaft seal never exceeds pressure in the return line.

The maximum values for pressure in the drain line (case 1) or return line (case 2) are given in the following figure (for continuous and intermittent operating conditions).

The drain port must always be connected up when more motors are operated in series.

c) Brake control

For gearmotors equipped with brakes, there are two motor versions available, i.e. the B02P or P010 executions.

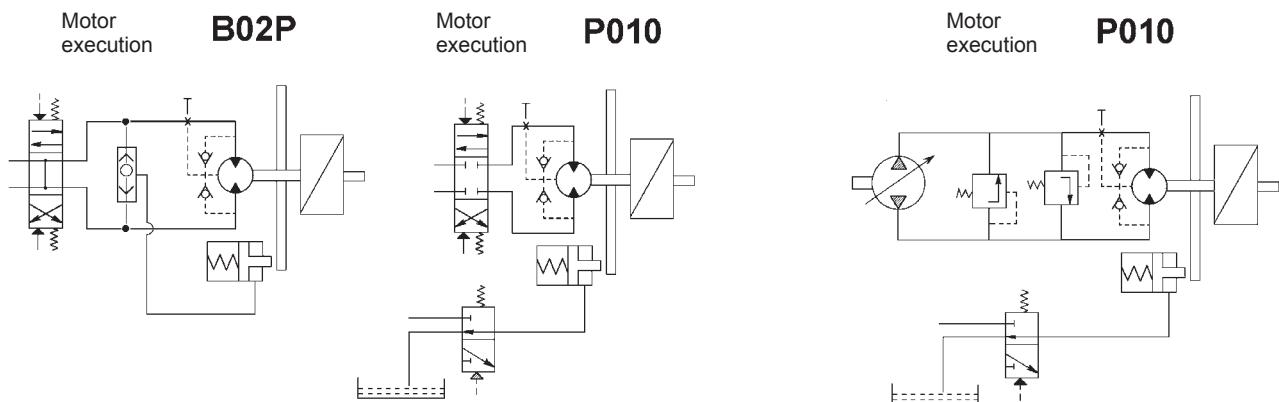

In the B02P version, the motor has an in-built, direct brake control system. In the P010 version, an auxiliary branching is required to control the brake. See the following diagram.

(A 33)

OPEN LOOP CIRCUIT

CLOSED LOOP CIRCUIT

Control valve open centre type Control valve closed centre type

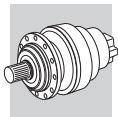

d) Hydraulic oil

Use hydraulic mineral oil with viscosity ISO VG 46 (46 Cst at $t = 40^\circ\text{C}$).
It is recommended the oil temperature should be between $+30^\circ\text{C}$ and $+70^\circ\text{C}$.

e) Oil filtering

For reliable motor operation and long life, it is important that the hydraulic circuit has a filter for a proper oil filtering according to the following degree:

degree 9 NAS 1638
degree 6 SAE
degree 18/15 SO DIS 4406

PLANETARY GEARBOX SERIES 300 ATEX CONFIGURATION

A1 SCOPE OF DOCUMENT

This Technical Bulletin serves as an aid for the selection of 300 series planetary gear units intended for installation in explosion risk areas, classified according to Directive 1999/92/EC.

This Technical Bulletin is an integral part of the 300 series, and subsequent revisions, and has the following scope:

- describes the **constructional characteristics** of the reducers comply with the directive 2014/34/EU, where these differ from those of standard construction gear units - See section A4.2.
- specifies the **selection criteria** approved by the manufacturer that said gear units operate keeping the minimum security requirements required by the Directive 2014/34/EU - See section A4.4.

A2 INTRODUCTION TO THE ATEX DIRECTIVES

Under the provisions of Directive 2014/34/EU, an explosive atmosphere is defined as a mixture:

- a) of **flammable substances**, whether gas, vapour, mist or dust;
- b) with **air**;
- c) in certain **atmospheric conditions**;
- d) in which, following ignition, combustion spreads to the entire unburned mixture (note that in the case of dust, the entire quantity of dust is not always completely burnt after combustion).

An atmosphere which may potentially be transformed into an explosive atmosphere due to operating and/or ambient conditions is defined as a **potentially explosive atmosphere**. The products governed by Directive 2014/34/EU are intended for use only in a potentially explosive atmosphere defined in this way.

European harmonised ATEX standards

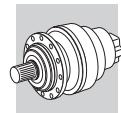

The European Union has issued two harmonisation guidelines in the area of health and safety. Directive 2014/34/EU stipulates the minimum safety requirements for products intended for use in explosion risk areas within the member countries of the European Union. The directive also assigns such equipment to **categories**, which are defined by the directive itself.

Directive 1999/92/EC defines the minimum health and safety requirements for the workplace, for working conditions and for the handling of products and materials in explosion risk areas. The directive also divides the workplace into zones and defines the criteria for the application of product **categories** in said **zones**.

The following table describes the **zones** into which the user of a plant, in which an explosive atmosphere may occur, is required to divide the equipment application areas.

Zones		Formation frequency of a potentially explosive atmosphere	Type of danger
Gaseous atmosphere	Dusty atmosphere		
G	D	Present continuously or for long periods	Permanent
0	20	Likely to occur in normal operation occasionally	Potential
1	21	Not likely to occur in normal operation but if it does occur will persist for short period only	Minimal
2	22		

BONFIGLIOLI RIDUTTORI gear units selected in this catalogue are suitable for installation in zones 1, 21, as highlighted in light gray in the above table, 2 and 22 only on request by contacting our Technical Department, highlighted in dark gray in the diagram above.

Starting from July 1, 2003, the Atex Directives apply throughout the European Union, and replace the divergent laws currently in force at national and European level in the field of explosive atmospheres.

The directives apply to mechanical, hydraulic and pneumatic equipment.

Levels of protection for the various categories of equipment

The various categories of equipment must be able to operate in conformity with the Manufacturer's operational specifications, at certain defined levels of protection.

Protection level	Category		Type of protection	Operating conditions
	Group I	Group II		
Very high	M1		Two independent means of protection or safety capable of operating even when two independent faults occur	The equipment remains powered and operational even in the presence of an explosive atmosphere
Very high		1	Two independent means of protection or safety capable of operating even when two independent faults occur	The equipment remains powered and operational in zones 0, 1, 2 (G) and/or zones 20, 21, 22 (D)
High	M2		Protection suitable for normal operation and heavy duty conditions	Power to the equipment is shut off in the presence of a potentially explosive atmosphere
High		2	Protection suitable for normal operation and frequent faults or equipment in which malfunction is normal.	The equipment remains powered and operational in zones 1, 2 (G) and/or zones 21, 22 (D)
Normal		3	Protection suitable for normal operation	The equipment remains powered and operational in zones 2 (G) and/or 22 (D)

BONFIGLIOLI TECHNICAL SERVICE

Definition of groups (EN 1127-1)

Group I Applies to equipment intended for use underground in parts of mines and those parts of surface installations of such mines, liable to be endangered by firedamp and/or combustible dust.

Group II Applies to equipment intended for use in other places liable to be endangered by explosive atmospheres.

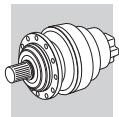

The areas highlighted in grey indicate the only categories in which BONFIGLIOLI RIDUTTORI products may be used. BONFIGLIOLI RIDUTTORI products may not therefore be installed in mines, classified in **Group I**. To summarise, the classification of equipment into groups, categories and zones is illustrated in the table below, where the availability of BONFIGLIOLI RIDUTTORI products is highlighted in grey.

Group	I mines, firedamp		II other potentially explosive areas (gas, dust)

BONFIGLIOLI TECHNICAL SERVICE

⁽¹⁾ G = gas D = DUST

⁽²⁾ as per EN13463

A3 USE, INSTALLATION AND MAINTENANCE

The instructions for safe storage, handling and use of the product are given in the unit's User, Installation and Service Manual.

This document must be kept in a suitable place, in the vicinity of the installed gear unit, as a reference for all persons authorised to work with or on the product throughout its service life.

The Manufacturer reserves the right to modify, supplement or improve the Manual, in the interests of the User.

A4 PECULIARITIES OF 300 SERIES GEAR UNITS COMPLIANT WITH DIRECTIVE ATEX

A4.1 PRODUCT AVAILABILITY

Frame sizes : 300 to 325.

Configurations	300...319 L 1	- - -	- - -
	300...321 L 2	300...306 R 2	- - -
	300...321 L 3	300...317 R 3	300...306 L 3
	300...325 L 4	300...321 R 4	- - -

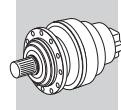

Versions	Foot mount	Flange mount	Shaft mount	Agitator (vertical)
	 PC	 PZ	 MC/HC	 MZ/HZ
	 FZ	 FP	 FDK	 FZP
				 VK

Inputs			 Hydraulic motor connecting
			 Standard negative multidisc brake 6 = Type: 4, 5, 6 A = Braking torque: A, B, C, ...

NOTE:

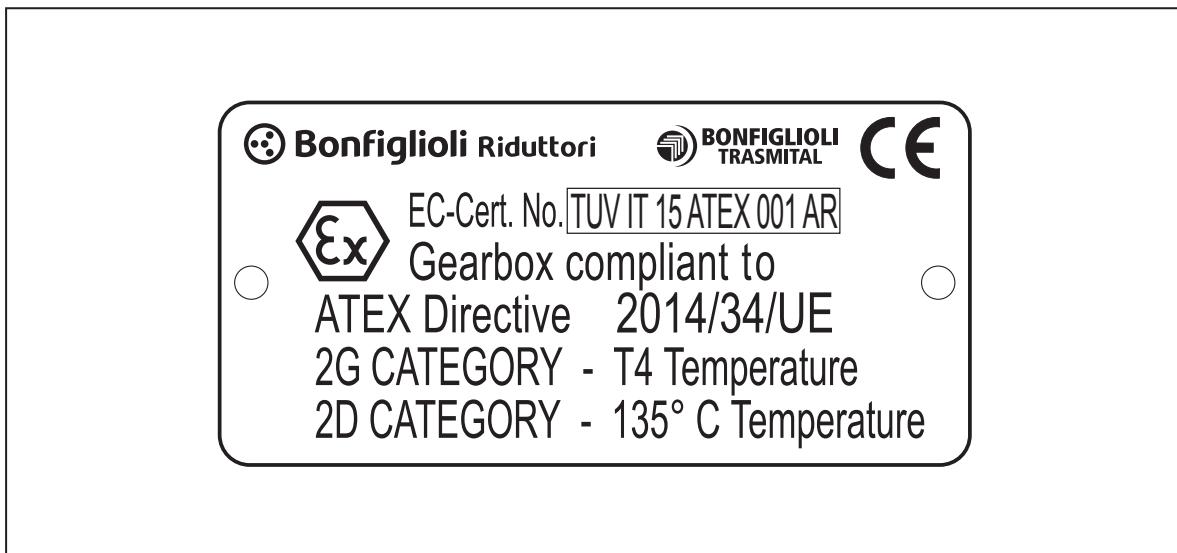

- With the negative multi disc brake, you must always ensure a minimum pressure for opening the discs. This must be 20% higher than that of the table of the brakes.
- The pressure max. of brake control must not exceed 50 bar.

Accessories					
	P ...	B0A	M0A	G0A	W0A

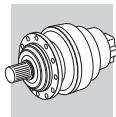

A4.2 CONSTRUCTIONAL CHARACTERISTICS

- Only synthetic lubricants are used.
- Only VITON® gaskets are used.
- Oil seals are equipped with dust lips.
- Vent plugs are equipped with valves with anti-intrusion springs, to prevent contamination of the lubricant by solid particles.
- Oil filler, drain and level plugs are made from steel and equipped with aluminium lock washers.
- No external metal moving parts in contact with other parts.
- No plastic parts prone to accumulating static charges; if present, such parts are shielded.
- Each gear unit is supplied with an installation drawing indicating the following information:
 - main technical characteristics
 - installation specifications
 - location of oil plugs for the specified mounting position
 - lubrication instructions
- The units are fitted with an additional nameplate specifying the product category. For example:

A4.3 OPERATIONAL CHARACTERISTICS

For installation in zones 21 and 22, the Customer must set out and implement a specific cleaning schedule for the unit's surfaces and recesses to prevent build ups of dust exceeding 5 mm in depth.

A4.4 SELECTING THE PRODUCT

The gear unit and gearmotor selection procedure is identical to that given in the 300 Series, and any future revisions thereof.

The following chapters contain variations to the procedure given in the catalogue, and subsequent revisions thereof as regards the selection of products compliant with 2014/34/EU, which supersede the procedure specified in the catalogue for units intended for installation in areas without risk of explosion.

These variations primarily affect the following:

- Application of an adjusting factor to the thermal capacity.
- Application of a service factor « f_s » with a greater safety margin.

- Thermal capacity « P_t » [kW]

This parameter is linked to the gearbox thermal limit. Values for the thermal capacity are listed within the rating charts of gearboxes and gearmotors and represent the mechanical power that can be transmitted continuously at an input speed n_1 , and at an ambient temperature of 20°C, without the temperatures t_o and t_s exceeding the values indicated in the chapter "Allowed temperature limits".

When the duty cycle is formed by short operating periods and rest time is long enough for the unit to cool down, the thermal capacity is hardly significant and it may be omitted from calculation.

For ambient temperatures other than 20°C, intermittent duty and drive speed n_1 other than the reference speed listed in the rating charts, P_t is to be adjusted through thermal factor f_t and/or speed factor f_v as listed in the following tables. Finally, make sure that the following condition is always satisfied:

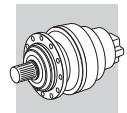

$$P_{r1} \leq P_t \times f_t \times f_v \times f_{Ex}$$

		f_t			
t_a (°C)	Continuous duty	Intermittent duty			
		Intermittence ratio « I »			
		80%	60%	40%	20%
10	1.2	1.3	1.6	1.8	2.0
20	1.0	1.1	1.3	1.5	1.7
30	0.9	1.0	1.2	1.3	1.5

A6 DECLARATION OF CONFORMITY

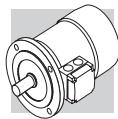

The Declaration of Conformity, is the document which attests to the conformity of the product to Directive 2014/34/EU.

The validity of the Declaration is bound to observance of the instructions given in the User, Installation and Service Manual for safe use of the product throughout its service life.

This can be downloaded from www.bonfiglioli.com where the manual is available in PDF format in a number of languages.

The instructions regarding ambient conditions are of particular importance inasmuch as failure to observe them during operation of the product renders the certificate null and void. In case of doubt regarding the validity of the certificate of conformity, contact the BONFIGLIOLI RIDUTTORI technical department.

M_B	[Nm]	Brake torque	W_{max}	[J]	Maximum brake work for each braking
M_N	[Nm]	Rated torque	Z	[1/h]	Permissible starting frequency, loaded
M_L	[Nm]	Counter-torque during acceleration	Z_0	[1/h]	Max. permissible unloaded starting frequency ($I = 50\%$)
M_s	[Nm]	Starting torque			

M2 INTRODUCTION

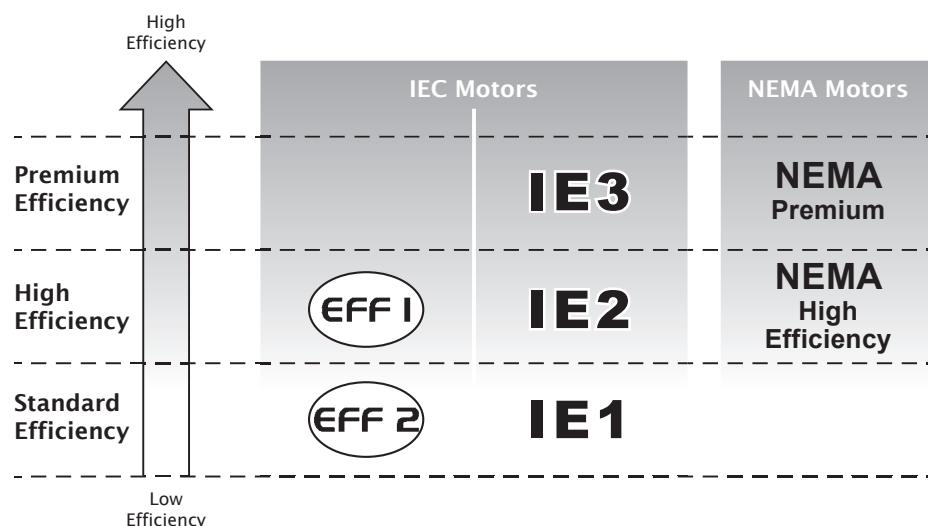

Efficiency classes and test methods

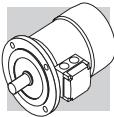

Efficiency classes characterise the efficiency with which an electric motor converts electrical energy into mechanical energy. In Europe, the energy efficiency of low voltage electric motors used to be classified using the voluntary Eff1/Eff2/Eff3 system. Outside Europe, other countries used to apply their own national systems, often very different to the European system. This uncertainty in standards led manufacturers to develop a harmonised international standard, and push for the issue of IEC (International Electrotechnical Commission) standard IEC 60034-30-1, "Efficiency classes of single-speed, three-phase, cage-induction motors (IE code)".

This new standard:

- defines new classes of efficiency
- **IE1** (standard efficiency)
- **IE2** (high efficiency)
- **IE3** (premium efficiency)
- provides a common, international reference system for the classification of electric motors
- and for national legislation
- introduces a new efficiency measurement method in conformity with standard IEC 60034-1-2:2007

The following table shows the correspondence among the main classes.

European Commission regulation 640/2009

IEC standard 60034-30-1 establishes technical guidelines for efficiency classification but does not impose any legal requirements for the adoption of any particular efficiency class. These are laid down by European Directives and national laws.

The EC Regulation applying Directive 2005/32/EC was adopted on the 22nd July 2009. This establishes the legal requirements and eco-compatible design criteria for electric motors, and imposes minimum efficiency limits according to the following schedule:

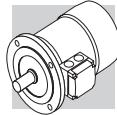

- **16/06/2011:** Electric motors must have a minimum efficiency level equivalent to class **IE2**
- **01/01/2015:** Electric motors with a rated power output between 7.5 kW and 375 kW must have a minimum efficiency level corresponding to **IE3**, or to **IE2** if controlled by an inverter.
- **01/01/2017:** Electric motors with a rated power output between 0.75 kW and 375 kW must have a minimum efficiency level corresponding to **IE3**, or to **IE2** if controlled by an inverter.

Scope and exclusions

EC Regulation 640/2009 applies to 2, 4, and 6 pole, single-speed, three-phase, 50 Hz or 60 Hz, cage-induction motors with rated outputs of 0.75 kW to 375 kW, and rated voltage up to 1000 V, designed for continuous duty (S1).

The regulation does not apply to:

- brakemotors
- motors designed to function immersed in liquid
- motors that are fully integrated in a product (like a gearbox, pump, fan), so that it is not possible to test the performance of the motor independently of that of the product.
- motors expressly designed to function:
 - at altitudes above 4000 metres a.s.l.;
 - in ambient temperatures above 60 °C;
 - at maximum operating temperatures above 400 °C;
 - in ambient temperatures below -30 °C (all motors) or below 0 °C (water-cooled motors);
 - with incoming liquid coolants at temperatures below 0 °C or above 32 °C;
 - in potentially explosive atmospheres as defined by Directive 2014/34/EU.

M3 GENERAL CHARACTERISTICS

M3.1 Production range

The asynchronous three-phase electric motors BX, BE, BN, MX, ME and M of BONFIGLIOLI RIDUTTORI's production, are available in basic design IMB5 and derived versions, with the following polarities: 2, 4, 6, 2/4, 2/6, 2/8, 2/12.

Motors are the enclosed type with outer fan and cage-type rotor for use in industrial environments. Standard versions of BX-BE/MX-ME motors are 230/400V Δ/Y (400/690V Δ/Y in sizes BX-BE 160 and BX-BE 180), 50 Hz motors, with a tolerance of ±10%. Standard BN/M motors are designed to operate from a rated voltage 230/400V Δ/Y (400/690V Δ/Y for frame sizes BN 160 through BN 200) 50 Hz, with ±10% tolerance.

M3.2 Standards

The motors described in this catalogue are manufactured to the applicable standards shown in the following table.

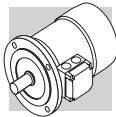

(F01)

Title	CEI	IEC
General requirements for rotating electrical machines	CEI EN 60034-1	IEC 60034-1
Terminal markings and direction of rotation of rotating machines	CEI 2-8	IEC 60034-8
Methods of cooling for electrical machines	CEI EN 60034-6	IEC 60034-6
Dimensions and output ratings for rotating electrical machines	EN 50347	IEC 60072
Classification of degree of protection provided by enclosures for rotating machines	CEI EN 60034-5	IEC 60034-5
Noise limits	CEI EN 60034-9	IEC 60034-9
Classification of type of construction and mounting arrangements	CEI EN 60034-7	IEC 60034-7
Rated voltage for low voltage mains power	CEI 8-6	IEC 60038
Vibration level of electric machines	CEI EN 60034-14	IEC 60034-14
Efficiency classes of single-speed, three-phase, cage-induction motors (IE code)	CEI EN 60034-30-1	IEC 60034-30-1
Standard method for determining losses and efficiency from tests	CEI EN 60034-2-1	IEC 60034-2-1

The motors also comply with foreign standards adapted to IEC 60034-1 as shown here below.

(F02)

DIN VDE 0530	Germany
BS5000 / BS4999	Great Britain
AS 1359	Australia
NBNC 51 - 101	Belgium
NEK - IEC 34	Norway
NF C 51	France
OEVE M 10	Austria
SEV 3009	Switzerland
NEN 3173	Netherlands
SS 426 01 01	Sweden

M3.3 Directives 2006/95/EC (LVD) and 2004/108/EC (EMC)

BX, BE, BN, MX, ME and M motors meet the requirements of Directives 2006/95/EC (Low Voltage Directive) and 2004/108/EC (Electromagnetic Compatibility Directive) and their name plates bear the CE mark.

As for the EMC Directive, construction is in accordance with standards CEI EN 60034-1, EN 61000-6-2, EN 61000-6-4.

Motors with FD brakes, when fitted with the suitable capacitive filter at rectifier input (option **CF**), meet the emission limits required by Standard EN 61000-6-3:2007 "Electromagnetic compatibility - Generic Emission Standard - Part 6-3 Residential, commercial and light industrial environment".

Motors also meet the requirements of standard CEI EN 60204-1 "Electrical equipment of machines". The responsibility for final product safety and compliance with applicable directives rests with the manufacturer or the assembler who incorporate the motors as component parts.

M3.4 Tolerances

As per the Norms CEI EN 60034-1, applicable the tolerances here below apply to the following quantities.

(F03)

-0.15 (1 - η) P ≤ 50kW	Efficiency
-(1 - cosφ)/6 min 0.02 max 0.07	Power factor
±20% *	Slip
+20%	Locked rotor current
-15% +25%	Locked rotor torque
-10%	Max. torque

(*) ± 30% for motors with Pn < 1 kW

M6 MECHANICAL FEATURES

M6.1 Versions

EC-normalised BX, BE and BN motors are available in the design versions as indicated in the table below here after as per Standards EN 60034-7 (BX/BE), CEI EN 60034-14 (BN).

Mounting versions are:

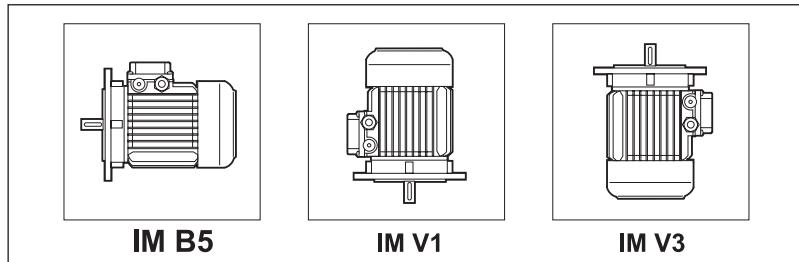

IM B5 (basic)

IM V1, IM V3 (derived)

IM B5 design motors can be installed in positions IM V1 and IM V3; in such cases, the basic design IM B5 is indicated on the motor name plate.

In design versions with a vertically located motor and shaft downwards, it is recommended to request the drip cover (always necessary for brake motors). This facility, included in the option list should be specified when ordering as it does not come as a standard device

(F07)

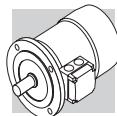

Flange output motors are also available with reduced coupling dimensions, as indicated in the table below - executions **B5R**. Their use in combination with gearboxes must be however coherent with the maximum installable power on gearboxes themselves (see chapters "Motors availability"). In case this condition is not met need to contact the Technical Service for the checking of the combination.

M6.2 Degree of protection

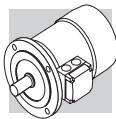

IP..

The following chart provides an overview of the degrees of protection available.

In addition to the degree of protection specified when ordering, motors to be installed outdoors require protection against direct sunlight and also – when they are to be installed vertically down – a drip cover to prevent the ingress of water and solid particles (option **RC**).

(F09)			IP 54	IP 55	IP 56
	BX - BE - BN	MX - ME - M		standard	
	BN_FD BN_FA	M_FD M_FA	standard		

IP		5	5		
0		Not protected	0	Not protected	
1		Protected against extraneous solid bodies having $\varnothing \geq 50$ mm	1		Protected against vertical water drips
2		Protected against extraneous solid bodies having $\varnothing \geq 12.5$ mm	2		Protected against vertical water drips inclined up to 15°
3		Protected against extraneous solid bodies having $\varnothing \geq 2.5$ mm	3		Protected against rain
4		Protected against extraneous solid bodies having $\varnothing \geq 1.0$ mm	4		Protected against water splashes
5		Protected against dust	5		Protected against jets of water
6		No dust ingress	6		Protected against powerful jets of water
7			7		Protected against the effects of temporary immersion
8			8		Protected against the effects of continuous immersion

M6.3 Cooling

The motors are externally ventilated (IC 411 to CEI EN 60034-6) and are equipped with a plastic fan working in both directions. The motors must be installed allowing sufficient space between fan cowl and the nearest wall to ensure free air intake and allow access for maintenance purposes on motor and brake, if supplied. Independent, forced air ventilation (IC 416) can be supplied on request (option **U1**). This solution enables to increase the motor duty factor when driven by an inverter and operating at reduced speed.

M6.4 Direction of rotation

Rotation is possible in both directions. If terminals U1, V1 and W1 are connected to line phases L1, L2 and L3, clockwise rotation (looking from drive end) is obtained. For counterclockwise rotation, switch two phases.

M6.5 Noise

Noise levels, measured using the method prescribed by ISO 1680 Standards, are within the maximum levels specified by Standards CEI EN 60034-9.

M6.6 Vibrations and balancing

Rotor shafts are balanced with half key fitted and fall within the vibration class N, as per Standard CEI EN 60034-14.

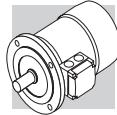

M6.7 Terminal box

Terminal board features 6 studs for eyelet terminal connection (9 studs execution for US voltage "Dual Voltage"). A ground terminal is also supplied for earthing of the equipment. Terminals number and type are shown in the following table. For brake power supply, please read par. 8 (brake FD), 9 (brake FA). In motor design IM B3, the terminal box is at the top (side opposite to feet).

Brakemotors house the a.c./d.c. rectifier (factory pre-wired) inside the terminal box.

Wiring instructions are provided either in the box or in the user manual.

(F10)			No. of terminals	Terminal threads	Wiremax cross section area sq mm²
BX 80, BX 90 BE 80, BE 90 BN 56 ... BN 90	MX2, MX3 ME2 M05 ... M2	6	M4	2.5

M7 ELECTRICAL CHARACTERISTICS

M7.1 Voltage

Single speed motors are provided in standard execution either for nominal voltage 230 / 400 V Δ/Y, 50 Hz, or 400 / 690 V Δ/Y, 50 Hz, with a voltage tolerance of $\pm 10\%$, according to what is specified on the below table.

On all the motors BN and M, for which the voltage / frequency configuration is not included on the below table, the voltage tolerance is reduced down to $\pm 5\%$.

For the operation out of the tolerance boundaries, the temperature may exceed by 10 K the limit provided by the adopted insulation class.

The motors are suitable for operation on distribution European grid with voltage complying with the publication IEC 60038.

(F13)

Efficiency class			V_{mot} $\pm 10\%$ 3 ~	Configuration
IE3	BX 80 ... BX 132	MX2 ... MX4	230 / 400 V - Δ/Y - 50 Hz	standard
	BX 160, BX 180	MX 5	400 / 690 V - Δ/Y - 50 Hz	standard

			230 / 400 V - Δ/Y - 50 Hz	standard
			400 / 690 V - Δ/Y - 50 Hz	At request, carries no extra charge
	BN 160 ... BN 200	M5	460 V Y - 60 Hz	standard
			400 / 690 V - Δ/Y - 50 Hz	standard
			460 V Δ - 60 Hz	standard

¹ 4 pole motor only

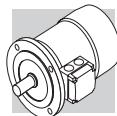

The only rated voltage for motors type et 50 Hz and all double speed motors is 400 V.
Applicable tolerances as per CEI EN 60034-1.

The table below shows the wiring options available.

(F14)

Number of poles		Winding connection
2	BE 80 ... BE 160, BN 63 ... BN 200	Δ / Y ⁽²⁾
4	BX 80 ... BX 180 BE 80 ... BE 180, BN 56 ... BN 200	
6	BE 90 ... BE 160, BN 63 ... BN 200	
8	BN 71 ... BN 132

(*) Excluded M_ motors

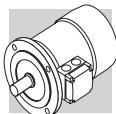

BX / BE / MX / ME motors are available at 60 Hz on a 4 pole configuration only, and their power rating is the same as their 50 Hz counterpart.

Double speed BN / M motors supplied at 60 Hz will have an increase of nominal power, referred to 50 Hz, equal to 15%, whereas double speed BX / BE / MX / ME motors are not available.

If a nominal power rating, equal to the normalised nominal power rating at 50 Hz, was requested to be on a nameplate of a motor meant to be voltage supplied at 60 Hz, the PN option shall be specified on the motor designation. Motors normally designed for a 50 Hz frequency may be used on a 60 Hz operating grid, but the related data shall be updated according to the following table. Motors designated for 50 Hz operation show on the nameplate also the values for 60 Hz operation (excluding motors in CUS execution and brake motors). See the following table.

(F16)

	50 Hz	60 Hz			
		V - 50 Hz	V - 60 Hz	Pn - 60 Hz	
BX/MX	230/400 Δ/Y	265 - 460 Δ Y	1	0.83	1.2
	400/690 Δ/Y	460 Δ			
	BN/M	230/400 Δ/Y			
		380 - 415 Y			
	400/690 Δ/Y	380 - 415 Δ			
	BN/M	265 - 280 Δ			
		440 - 480 Y	1.15	1	1.2
		440 - 480 Δ			

M7.3 Ambient temperature

Catalogue rating values are calculated for 50 Hz operation and for standard ambient conditions (temperature 40 °C; elevation ≤ 1000 m a.s.l.) as per the CEI EN 60034-1 Standards.

The motors can be used within the 40 - 60 °C temperature range with rated power output adjusted by factors given in the table below.

(F17)

Ambient temperature (°C)	40°	45°	50°	55°	60°
Permitted power as a % of rated power	100%	95%	90%	85%	80%

Should a derating factor higher than 15% apply please consult factory.

M7.4 50 HZ normalized power

PN

With this option, motor name plate includes 50 Hz normalized power information even when motor is designated for operation with 60 Hz power mains. For 60 Hz supplies along with voltages 230/460V and 575V the PN option is applied by default.

M7.5 Motors for USA and Canada

CUS

Motors are available in NEMA Design C configuration (concerning electrical characteristics), in compliance with CSA (Canadian standard) C22.2 No. 100 and UL (Underwriters Laboratory) UL 1004-1. By specifying the option CUS the name plate is marked with both symbols shown here below.

CUS option is not currently available for IE3 motors.

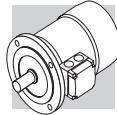

The CUS option does not apply to servo-ventilated motors.

US power mains voltages and the corresponding rated voltages to be specified for the motor are indicated in the following table:

(F18)

Frequency	Mains voltage	V_{mot}
60 Hz	208 V	200 V
	240 V	230 V
	480 V	460 V
	600 V	575 V

CUS option is applicable onto 50 Hz operating motors as well.

Motors with voltage in ratio 2 (e.g. 230/460-60; 220/440-60) feature, as standard, a 9-stud terminal board. For same executions, as well as for 575V-60Hz supply, the nominal rating is coincident with the correspondent 50Hz rating.

For DC brake motors type BN_FD, the rectifier is connected to a single-phase 230 VAC supply voltage in the motor terminal box.

Brake power supply for brake motors is as follows:

(F19)

BN_FD M_FD	BN_FA M_FA	Power supply
Connected to terminal box 1~230V c.a.	Separate power supply	230V Δ
	Separate power supply	460V Y

M7.6 China Compulsory Certification

CCC

Electric motors destined for sale in the People's Republic of China have to be certified under the CCC (China Compulsory Certification) system. BN motors of up to 7 Nm in rated torque are available with CCC certification and a special nameplate bearing the mark shown below:

CCC option is not currently available for IE3 motors.

CCC option is not currently available for servo - ventilated motors.

M7.7 Insulation class

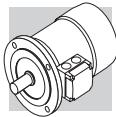

CL F

Bonfiglioli motors use class **F** insulating materials (enamelled wire, insulators, impregnation resins) as compare to the standard motor.

In standard motors, stator windings over temperature normally stays below the 80 K limit corresponding to class B over temperature.

A careful selection of insulating components makes the motors compatible with tropical climates and normal vibration.

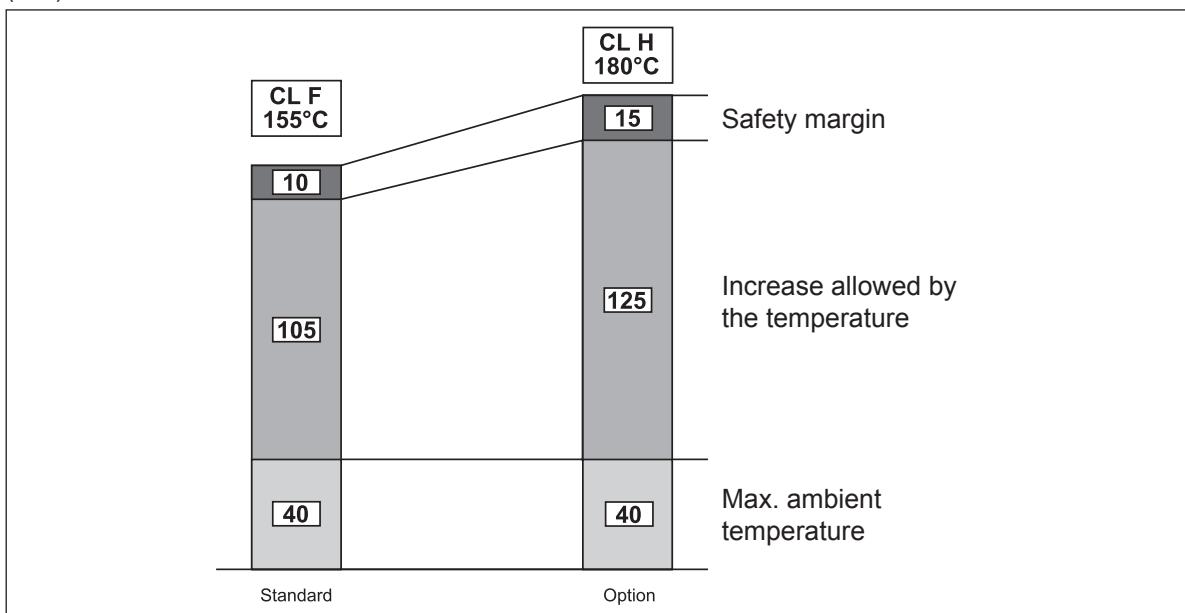

For applications involving the presence of aggressive chemicals or high humidity, contact Bonfiglioli Engineering for assistance with product selection.

CL H

Motors manufactured in insulation class **H** are available at request.
Not available for motors in compliance with CSA e UL standards (CUS option).

(F20)

M7.8 Type of duty

Unless otherwise specified, catalogue motor power refers to continuous duty S1.

Any operating conditions other than S1 duty must be identified in accordance with duty cycle definitions laid down in standards CEI EN 60034-1.

For duty cycles S2 and S3, the power increase co-efficient reported in the following table may be used. Please note that the table provided below applies to single-speed motors.

As an alternative to S1 continuous duty, one of the following values can be specified at the product configuration stage: S2, S3 or S9. The motor nameplate will be marked with an increased power rating to suit the type of duty, and with specific electrical data and a duty type of S2-30 min, S3-70% or S9 respectively.

For further details, contact Bonfiglioli's Technical Service.

Please contact Bonfiglioli Engineering for the power increase coefficients applicable to switch-pole motors.

(F21)

	Type of duty						
	S2			S3 *			S4 - S9
	10	Duration (min) 30 (*)	60	25%	Intermittence (I) 40%	70% (*)	Contact us
f_m	1.35	1.15	1.05	1.25	1.15	1.1	

* Cycle duration must, in any event, be equal to or less than 10 minutes; if this time is exceeded, please contact our Technical Service.

(*) Default values from options (tab. F05).

M7.8.1 Cyclic duration factor:

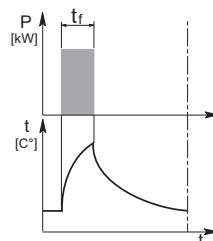

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (01)$$

t_f = work time under constant load

t_r = rest time

M7.8.2 Limited duration duty S2

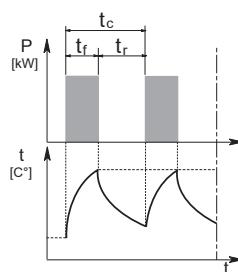

This type of duty is characterized by operation at constant load for a limited time, which is shorter than the time required to reach thermal equilibrium, followed by a rest period of sufficient duration to restore ambient temperature in the motor.

M7.8.3 Periodical intermittent duty S3:

This type of duty is characterized by a sequence of identical operation cycles, each including a constant load operation period and a rest period.

For this type of duty, the starting current does not significantly influence overtemperature.

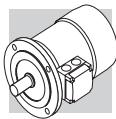

M7.9 Inverter-controlled motors

The electric motors Bonfiglioli may be used in combination with PWM inverters with rated voltage at transformer input up to 500 V. Standard motors use a phase insulating system with separators, class 2 enamelled wire and class H impregnation resins (1600V peak-to-peak voltage pulse capacity and rise edge $t_s > 0.1\mu s$ at motor terminals). Typical torque/speed curves referred to S1 duty for motors with base frequency $f_b = 50$ Hz are reported in the table below.

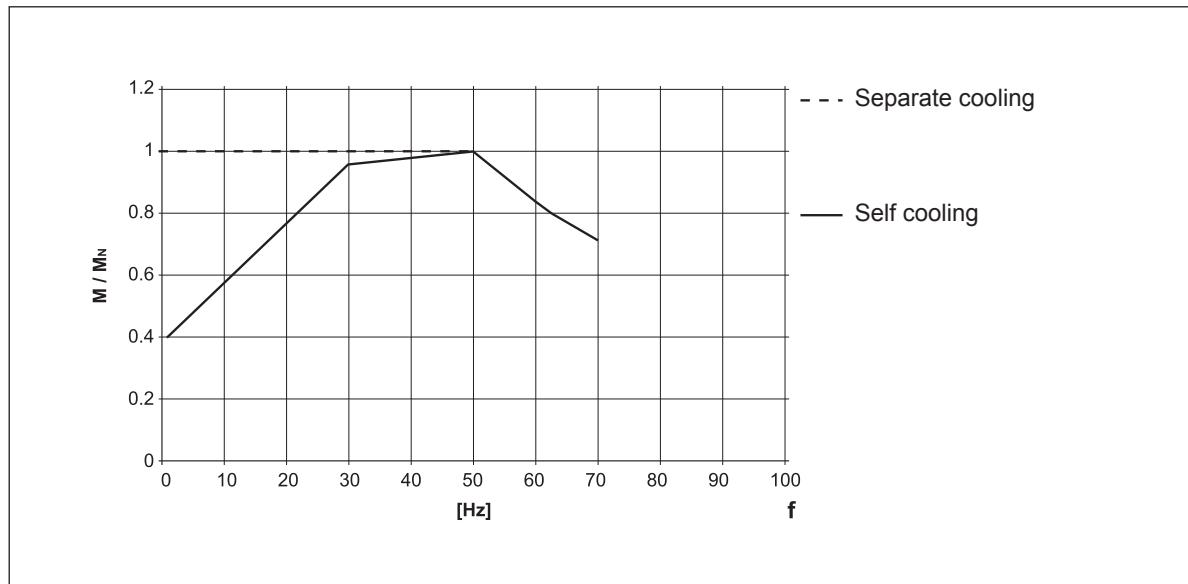

Because ventilation is somewhat impaired in operation at lower frequencies (about 30 Hz), standard motors with incorporated fan (IC411) require adequate torque derating or - alternately - the addition of a separate supply fan cooling.

Above base frequency, upon reaching the maximum output voltage of the inverter, the motor enters a steady-power field of operation, and shaft torque drops with ratio (f/f_{fb}) .

As motor maximum torque decreases with $(f/f_{fb})^2$, the allowed overloading must be reduced progressively.

(F22)

The following table reports the mechanical speed limit for motors operating above rated frequency:

(F23)

		n [min ⁻¹]		
		2p	4p	6p
≤ BE 112 - BN 112	ME2, ME3 M05 ... M3	5200	4000	3000
≥ BE 132 - BN 132	ME4, ME5 M4, M5	4500	4000	3000
BX 80 ... BX 180	MX2 ... MX5		4000	

Above rated speed, motors generate increased mechanical vibration and fan noise. Class B rotor balancing is highly recommended in these applications. Installing a separate supply fan cooling may also be advisable.

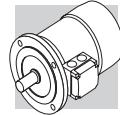

Remote-controlled fan and brake (if fitted) must always be connected direct to mains power supply.

M7.10 Permissible starts per hour, Z

The rating charts of brakemotors lend the permitted number of starts Z_0 , based on 50% intermittence and for unloaded operation.

The catalogue value represents the maximum number of starts per hour for the motor without exceeding the rated temperature for the insulation class F.

To give a practical example for an application characterized by inertia J_c , drawing power P_f and requiring mean torque at start-up M_L the actual number of starts per hour for the motor can be calculated approximately through the following equation:

$$Z = \frac{Z_0 \cdot K_c \cdot K_d}{K_J} \quad (02)$$

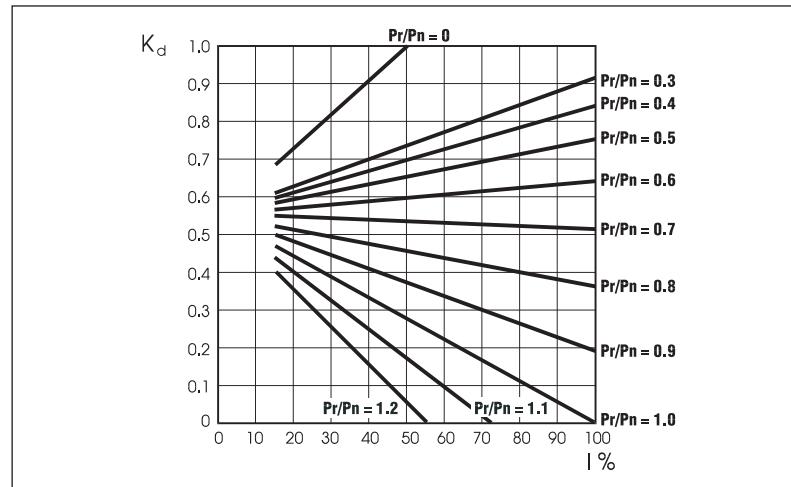

where:

$$K_J = \frac{J_m + J_c}{J_m} \quad \text{inertia factor}$$

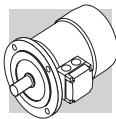

$$K_c = \frac{M_a - M_L}{M_a} \quad \text{torque factor}$$

$$K_d = \quad \text{load factor, see the following table}$$

(F24)

If actual starts per hour is within permitted value (Z) it may be worth checking that braking work is compatible with brake (thermal) capacity W_{max} also given in tables (F31), (F39) and dependent on the number of switches (c/h).

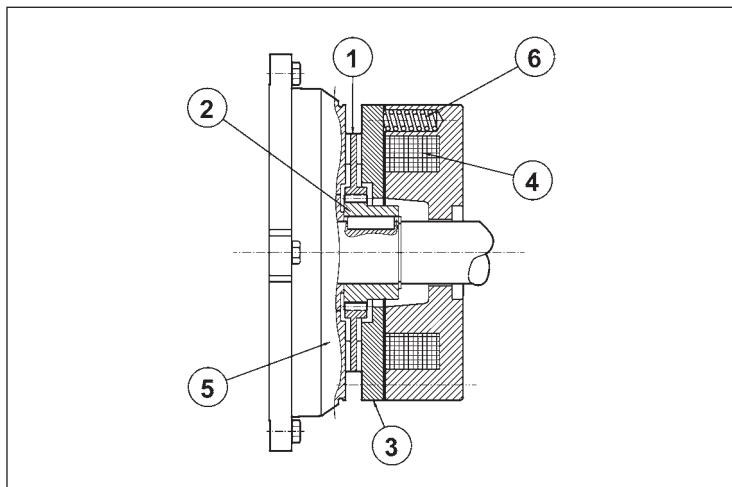

M8 ASYNCHRONOUS BRAKE MOTORS

M8.1 Operation

Versions with incorporated brake use spring-applied DC (FD option) or AC (FA options) brakes. All brakes are designed to provide fail-safe operation, meaning that they are applied by spring-action in the event of power failure.

(F25)

Key:

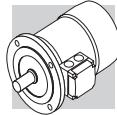

- ① brake disc
- ② disc carrier
- ③ pressure plate
- ④ brake coil
- ⑤ motor rear shield
- ⑥ brake springs

When voltage is interrupted, pressure springs push the armature plate against the brake disc. The disc becomes trapped between the armature plate and motor shield and stops the shaft from rotation.

When the coil is energized, a magnetic field strong enough to overcome spring action attracts the armature plate, so that the brake disc – which is integral with the motor shaft – is released.

M8.2 Most significant features

- High braking torques (normally $M_b \approx 2 \text{ Mn}$), braking torque adjustment.
- Steel brake disc with double friction lining (low-wear, asbestos-free lining).
- Hexagonal seat on motor shaft fan end (N.D.E.) for manual rotation (not compatible with options PS, RC, TC, U1, U2, EN1, EN2, EN3, EN4, EN5, EN6).
- Manual release lever (options R and RM for BN/M_FD; option R for BN/M_FA).
- Corrosion-proof treatment on all brake surfaces.
- Insulation class F.

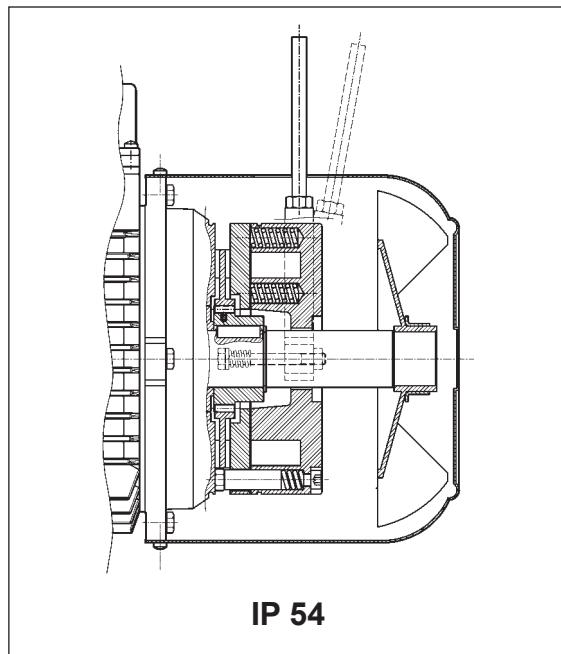

M9 DC BRAKE MOTORS TYPE BN_FD and M_FD

Frame sizes: BN 63 ... BN 200L / M05 ... M5

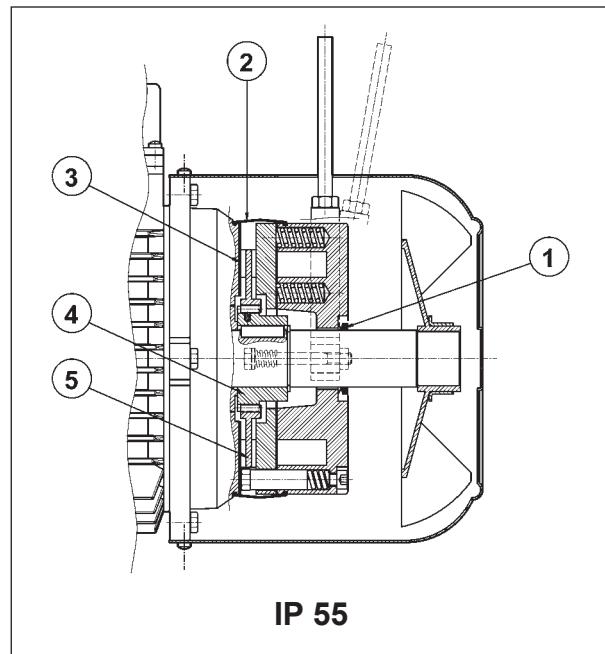

BE/ME motors may be available equipped with the FD brake, for further information please contact our Technical Department.

(F26)

IP 54

(F27)

IP 55

Direct current toroidal-coil electromagnetic brake bolted onto motor shield. Preloading springs provide axial positioning of magnet body.

Brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device.

Brake torque factory setting is indicated in the corresponding motor rating charts. Braking torque may be modified by changing the type and/or number of springs.

At request, motors may be equipped with manual release lever with automatic return (**R**) or system for holding brake in the released position (**RM**).

See variant at paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations.

FD brakes ensure excellent dynamic performance with low noise. DC brake operating characteristics may be optimized to meet application requirements by choosing from the various rectifier/power supply and wiring connection options available.

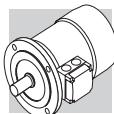

For applications involving lifting and/or high hourly energy dissipation, contact Bonfiglioli's Technical Service.

M9.1 Degree of protection

Standard protection class is IP54.

Brake motor FD is also available in protection class **IP55**, which mandates the following variants:

- ① V-ring at N.D.E. of motor shaft
- ② dust and water-proof rubber boot
- ③ stainless steel ring placed between motor shield and brake disc
- ④ stainless steel hub
- ⑤ stainless steel brake disc

M9.2 FD brake power supply

A rectifier accommodated inside the terminal box feeds the DC brake coil. Wiring connection across rectifier and brake coil is performed at the factory. On all single-pole motors, rectifier is connected to the motor terminal board. Rectifier standard power supply voltage V_B is as indicated in the following table, regardless of mains frequency:

(F28)

2, 4, 6 P						1 speed
		BN_FD / M_FD	V_{mot} $\pm 10\%$ 3 ~	V_B $\pm 10\%$ 1 ~	brake connected to terminal board power supply	separate power supply
BN 63...BN 132	M05...M4LB	230/400 V – 50 Hz	230 V	standard	specify V_B SA o V_B SD	
BN 160...BN 200	M4LC...M5	400/690 V – 50 Hz	400 V	standard	specify V_B SA o V_B SD	

Switch-pole motors feature a separate power supply line for the brake with rectifier input voltage V_B as indicated in the table below:

(F29)

2/4, 2/6, 2/8, 2/12, 4/6, 4/8 P						2 speed
		BN_FD / M_FD	V_{mot} $\pm 10\%$ 3 ~	V_B $\pm 10\%$ 1 ~	brake connected to terminal board power supply	separate power supply
BN 63...BN 132	M05...M4LB	400 V – 50 Hz	230 V	●	specify V_B SA o V_B SD	

The diode half-wave rectifier ($VDC \approx 0,45 \times VAC$) is available in versions **NB**, **SB**, **NBR** e **SBR**, as detailed in the table below:

(F30)

		brake	standard	at request

NB

SB

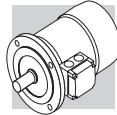

SBR

NBR

SB

SBR

(*) $t_{2c} < t_{2r} < t_2$

Rectifier **SB** with electronic energizing control over-energizes the electromagnet upon power-up to cut brake release response time and then switches to normal half-wave operation once the brake has been released.

Use of the **SB** rectifier is mandatory in the event of:

- high number of operations per hour
- reduced brake release response time
- brake is exposed to extreme thermal stress

Rectifiers **NBR** or **SBR** are available for applications requiring quick brake intervention (braking condition reinstatement) response.

These rectifiers complement the **NB** and **SB** types as their electronic circuit incorporates a static switch that de-energizes the brake quickly in the event voltage is missing.

This arrangement ensures short brake release response time with no need for additional external wiring and contacts.

Optimum performance of rectifiers **NBR** and **SBR** is achieved with separate brake power supply.

Versions available: 230Vac ±10%, 400Vac ± 10%, 50/60 Hz (with power supply); 100Vdc ±10%, 180Vdc ± 10% (with SD option).

M9.3 FD brake technical specifications

The table below reports the technical specifications of DC brakes FD.

(F31)

Brake	Brake torque M_b [Nm] springs			Release		Braking		W _{max} per brake operation			W	P
	6	4	2	t ₁ [ms]	t _{1s} [ms]	t ₂ [ms]	t _{2c} [ms]	10 s/h	100 s/h	1000 s/h		
FD02	—	3.5	1.75	30	15	80	9	4500	1400	180	15	17
FD03	5	3.5	1.75	50	20	100	12	7000	1900	230	25	24
FD53	7.5	5	2.5	60	30	100	12					
FD04	15	10	5	80	35	140	15	10000	3100	350	30	33
FD14												
FD05	40	26	13	130	65	170	20	18000	4500	500	50	45
FD15	40	26	13	130	65	170	20					
FD55	55	37	18	—	65	170	20	29000	7400	800	80	65
FD06S	60	40	20	—	80	220	25					
FD56	—	75	37	—	90	250	20	29000	7400	800	80	65
FD06												
FD07	150	100	50	—	120	200	25	40000	9300	1000	130	65
FD08*	250	200	170	—	140	350	30	60000	14000	1500	230	100
FD09**	400	300	200	—	200	450	40	70000	15000	1700	230	120

* brake torque values obtained with 9, 7 and 6 springs, respectively

t₁ = brake release time with half-wave rectifier

t_{1s} = brake release time with over-energizing rectifier

t₂ = brake engagement time with AC line interruption and separate power supply

** brake torque values obtained with 12, 9 and 6 springs, respectively

t_{2c} = brake engagement time with AC and DC line interruption – Values for t₁, t_{1s}, t₂, t_{2c} indicated in the tab. (F30) are referred to brake set at maximum torque, medium air gap and rated voltage

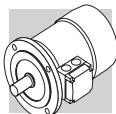

W_{max} = max energy per brake operation

W = braking energy between two successive air gap adjustments

P_b = brake power absorption at 20 °C

M_b = static braking torque (±15%)

s/h = starts per hour

The brake pad wear depends on the operating/ambient conditions (temperature, humidity, angular speed, specifica pressure); Therefore the declared wear rate must be considered as indicative.

M9.4 FD brake connections

On standard single-pole motors, the rectifier is connected to the motor terminal board at the factory. For switch-pole motors and where a separate brake power supply is required, connection to rectifier must comply with brake voltage VB stated in motor name plate.

Because the load is of the inductive type, brake control and DC line interruption must use contacts from the usage class AC-3 to IEC 60947-4-1.

Table (F32) – Brake power supply from motor terminals and AC line interruption
Delayed stop time t_2 and function of motor time constants.

Mandatory when soft-start/stops are required.

Table (F33) – Brake coil with separate power supply and AC line interruption

Normal stop time independent of motor.

Achieved stop times t_2 are indicated in the table (F31).

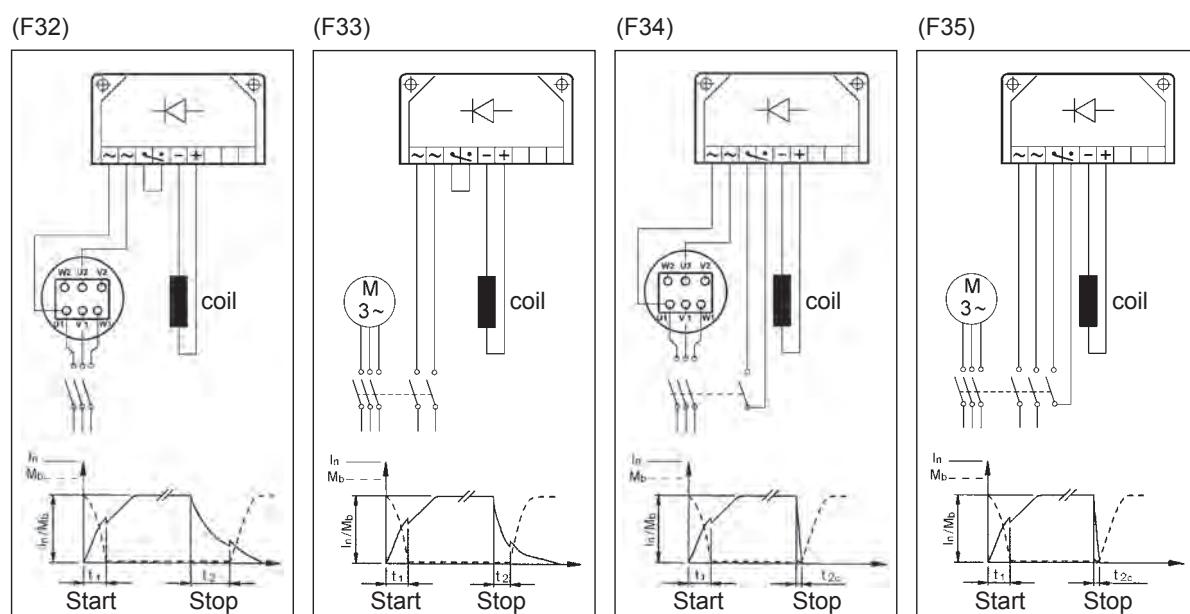

Table (F34) – Brake coil power supply from motor terminals and AC/DC line interruption.

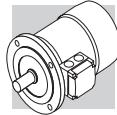

Quick stop with operation times t_{2c} as per table (F31).

Table (F35) – Brake coil with separate power supply and AC/DC line interruption.

Stop time decreases by values t_{2c} indicated in the table (F31).

The brake may be voltage supplied directly from the motor terminal box (from tab. F32 to tab. F35) only if the nominal voltage of the brake is the same as the smaller voltage of the motor.

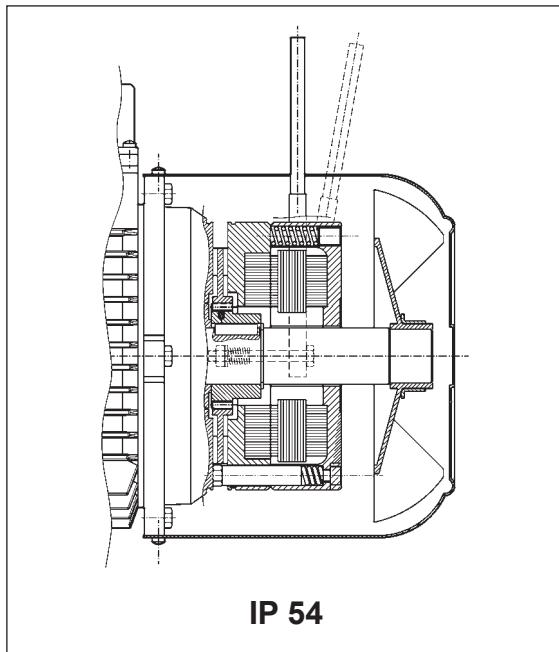

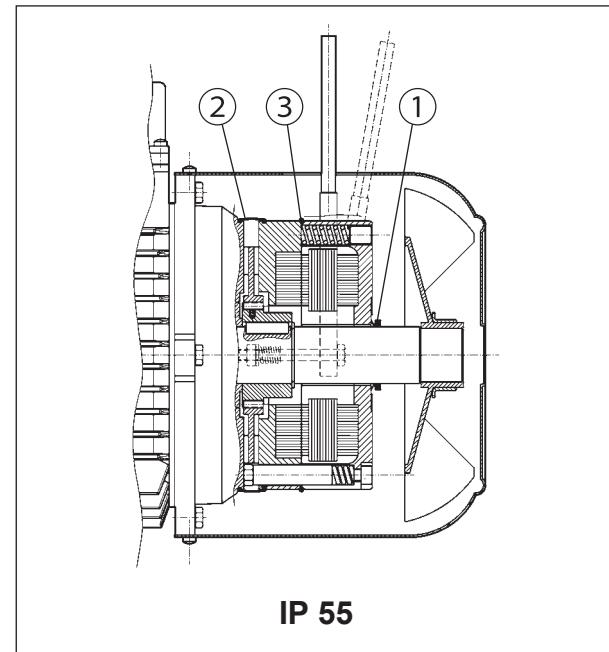

M10 AC BRAKE MOTORS TYPE BN_FA and M_FA

Frame sizes: BN 63 ... BN 180M / M05 ... M5

(F36)

(F37)

Electromagnetic brake operates from three-phase alternated current power supply and is bolted onto conveyor shield. Preloading springs provide axial positioning of magnet body.

Steel brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device.

Brake torque factory setting is indicated in the corresponding motor rating charts.

Spring preloading screws provide stepless braking torque adjustment.

Torque adjustment range is 30% $M_{bMAX} < M_b < M_{bMAX}$ (where M_{bMAX} is maximum braking torque as shown in tab. (F39)).

Thanks to their high dynamic characteristics, FA brakes are ideal for heavy-duty applications as well as applications requiring frequent stop/starts and very fast response time.

Motors may be equipped with manual release lever with automatic return (R) at request. See variant at paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations.

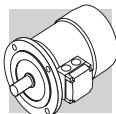

For applications involving lifting and/or high hourly energy dissipation, contact Bonfiglioli's Technical Service.

M10.1 Degree of protection

Standard protection class is IP54.

Brake motor FA is also available in protection class **IP55**, which mandates the following variants:

- ① V-ring at N.D.E. of motor shaft
- ② dust and water-proof rubber boot
- ③ O-ring

M10.2 FA brake power supply

In single speed motors, power supply is brought to the brake coil direct from the motor terminal box. As a result, brake voltage and motor voltage are the same. In this case, brake voltage indication may be omitted in the designation.

Switch-pole motors and motors with separate brake power supply feature an auxiliary terminal board with 6 terminals for connection to brake line. In both cases, brake voltage indication in the designation is mandatory.

The following table reports standard AC brake power supply ratings for single- and switch-pole motors:

(F38)

single-pole motor	BN 63...BN 132	BN 160...BN 180
	230Δ / 400Y V ±10% – 50 Hz	400Δ / 690Y V ±10% – 50 Hz
	265Δ / 460Y ±10% - 60 Hz	460Y – 60 Hz
switch-pole motors (separate power supply line)	BN 63...BN 132	
	230Δ / 400Y V ±10% – 50 Hz	
	460Y - 60 Hz	

Unless otherwise specified, standard brake power supply is 230Δ /400Y V - 50 Hz.

Special voltages in the 24...690 V, 50-60 Hz range are available at request.

M10.3 Technical specifications of FA brakes

(F39)

Brake	Brake torque M_b [Nm]	Release t_1 [ms]	Braking t_2 [ms]		W_{max} [J]	10 s/h	100 s/h	1000 s/h	W [MJ]	P [VA]
FA 02	3.5	4	20	4500	1400	180	15	60		
FA 03	7.5	4	40	7000	1900	230	25	80		
FA 04										
FA 14	15	6	60	10000	3100	350	30	110		
FA 05										
FA 15	40	8	90	18000	4500	500	50	250		
FA 06S	60	16	120	20000	4800	550	70	470		
FA 06	75	16	140	29000	7400	800	80	550		
FA 07	150	16	180	40000	9300	1000	130	600		
FA 08	250	20	200	60000	14000	1500	230	1200		

M_b = max static braking torque ($\pm 15\%$)

NOTE

Values t_1 and t_2 in the table refer to a brake set at rated torque, medium air gap and rated voltage.

t_1 = brake release time

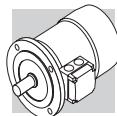

t_2 = brake engagement time

W_{max} = max energy per brake operation (brake thermal capacity)

W = braking energy between two successive air gap adjustments

P_b = power drawn by brake at 20° (50 Hz)

s/h = starts per hour

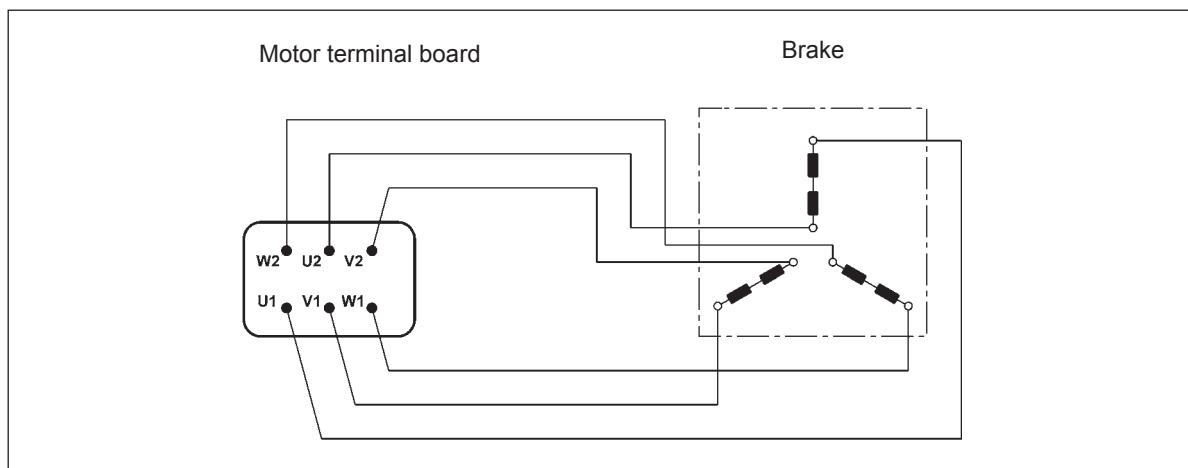

The brake pad wear depends on the operating/ambient conditions (temperature, humidity, angular speed, specifica pressure); Therefore the declared wear rate must be considered as indicative.

M10.4 FA brake connections

The diagram below shows the wiring when brake is connected directly to same power supply of the motor:

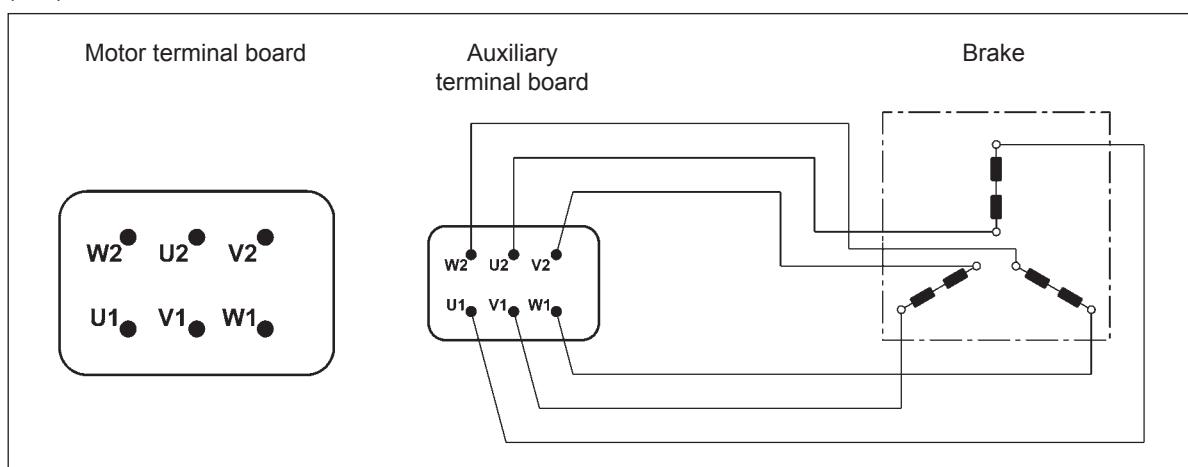

(F40)

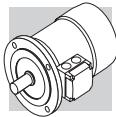

Switch-pole motors and, at request, single-pole motors with separate power supply are equipped with an auxiliary terminal board with 6 terminals for brake connection.

In this version, motors feature a larger terminal box. See diagram below:

(F41)

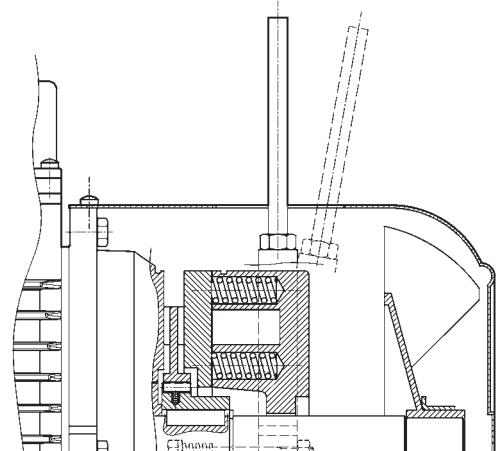

M11 BRAKE RELEASE SYSTEMS

Spring-applied brakes type FD and FA may be equipped with optional manual release devices. These are typically used for manually releasing the brake before servicing any machine or plant parts operated by the motor.

(F42)

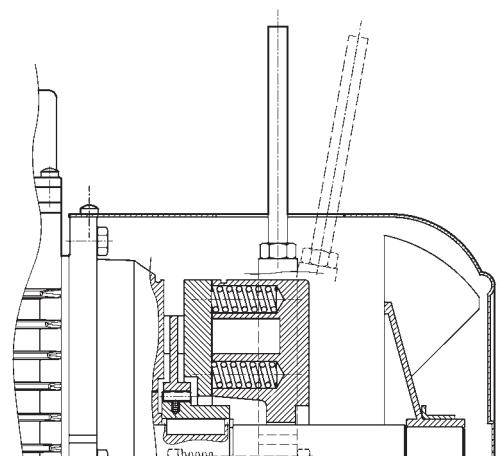

R

A return spring brings the release lever back in the original position.

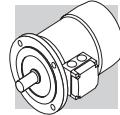

(F43)

RM

On motors type BN_FD, if the option RM is specified, the release device may be locked in the "release" position by tightening the lever until its end becomes engaged with a brake housing projection.

The availability for the various disengagement devices is charted here below:

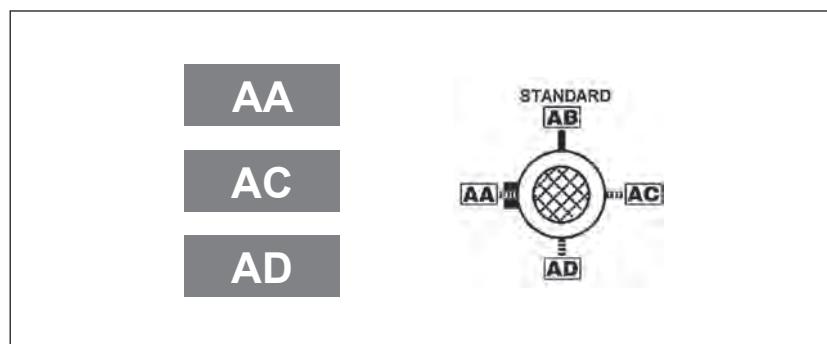

(F44)

	R	RM
BN_FD	BN 63...BN 200	BN 63 ... BN 132 FD07
BN_FA	BN 63...BN 180M	

M11.1 Release lever orientation

Unless otherwise specified, the release lever is located 90° away from the terminal box – identified by letters [AB] in the diagram below – in a clockwise direction on both options **R** and **RM**. Alternative lever positions [AA], [AC] and [AD] are also possible when the corresponding option is specified:

(F45)

M12 OPTIONS

M12.1 Soft-start / stop

F1

An optional flywheel - option F1 - is available for applications requiring soft starting or stopping. The flywheel's added inertia uses up kinetic energy during starting and returns it back during braking, thus catering for more progressive and gradual shock loads. The optional flywheel is available for brake motors type BN_FD with specific characteristics as detailed in the table below:

(F46)

Main data for flywheel of motore type: BN_FD, M_FD			
		Fly-wheel weight [Kg]	Fly-wheel inertia [Kgm²]
BN 63	M05	0.69	0.00063
BN 71	M1	1.13	0.00135
BN 80	M2	1.67	0.00270
BN 90 S - BN 90 L	-	2.51	0.00530
BN 100	M3	3.48	0.00840
BN 112	-	4.82	0.01483
BN 132 S - BN 132 M	M4	6.19	0.02580

M12.2 Capacitive filter

CF

An optional capacitive filter is available for DC brake motors type BN_FD only. When the suitable capacitive filter is installed upstream of the rectifier (option CF), motors comply with the emission limits required by standard EN61000-6-3:2007“ Electromagnetic Compatibility – Generic Emission Standard – Part 6-3: Residential, commercial and light industrial environment”.

M12.3 Thermal protective devices

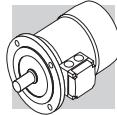

In addition to the standard protection provided by the magneto-thermal device, motors can be supplied with built-in thermal probes to protect the winding against overheating caused, by insufficient ventilation or by an intermittent duty.

This additional protection should always be specified for servoventilated motors (IC416).

M12.4 Thermistors

E3

These are semi-conductors having rapid resistance variation when they are close to the rated switch off temperature (150 °C). Variations of the $R = f(T)$ characteristic are specified under DIN 44081, IEC 34-11 Standards. Positive temperature coefficient thermistors are normally used (also known as PTC “cold conductor resistors”). Thermistors cannot control relays directly and must be connected to a suitable disconnect device. Thus protected, three PTCs connected in series are installed in the winding, the terminals of which are located on the auxiliary terminal-board.

K1

The design characteristics of this sub-group of PTC thermistors allow them to be used as positive temperature coefficient sensors with variable resistance.

Functioning temperature range: 0°C ... +260°C.

Thermistors cannot control relays directly and must be connected to a suitable disconnect device.

Terminals (polarised) for 1 x KTY 84-130 are provided on an auxiliary terminal strip.

M12.5 Bimetallic thermostates

D3

These types of protective devices house a bimetal disk. When the rated switch off temperature (150 °C) is reached, the disk switches the contacts from their initial rest position.

As temperature falls, the disk and the contacts automatically return to rest position.

Three bimetallic thermostates connected in series are usually employed, with normally closed contacts. The terminals are located on an auxiliary terminal-board.

M12.6 Plug connector

CON

Three types of connectors (CON 1, CON 2, CON 3) are provided; they can be mounted in two different positions: right side of terminal box cover (C1D, C2D, C3D); left side of terminal box cover (C1S, C2S, C3S).

The option CON is applicable to single speed BN and M motors (2, 4, 6, 8 poles), and BX / BE and MX / ME motors on the sizes specified on the following table. All double speed motors are excluded.

The connectors CON 1 / CON 2 are available for BX-BE/MX-ME and BN/M motors without brake and for BN brakemotors equipped with DC brake type FD, for the motor sizes listed below.

The male connector (with pins) is mounted on the motor, the female connector is not provided.

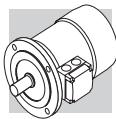

With CON option, the winding connection is always Y.

With option U1 "forced ventilation", the fan unit supply is available inside the separate terminal box fixed to fan cover.

With options EN1...EN6, the encoder connection is made by a cable not connected to the motor plug connector.

The CON option is not applicable to brakemotors equipped with AC brake type FA.

The CON option is not available when at least one of the next options are selected: the U2, CUS, IC.

M12.7 Control of brake operation

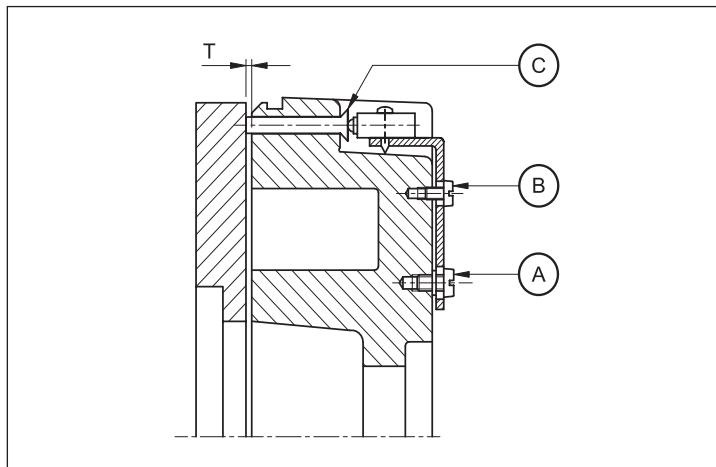

MSW

The microswitch can be set in order to obtain from it a signal related to the attraction/release of anchor plate, or it can be set in order to give feedback when the air gap reaches the maximum value.

MSW option is available for brakes FD03...FD09.

The microswitch is provided with three lead wires (NC, NO, COM). The next figure shown the main components of the brake equipped with microswitch.

(F53)

- A: Plate f xing screws
- B: Setting screws
- C: Actuator control pin

M12.8 Additional cable entry for brakemotors

IC

The terminal box cover of brakemotors BN63...BN160MR / M05...M4 is provided with two additional cable entry M16 x 1.5 (one cable entry per side).

The terminal box cover of brakemotors BN160...BN200 / M5 is provided with an additional cable entry M16 x 1.5 next to the cable entry used for the brake.

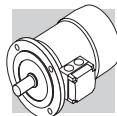

M12.9 Anti-condensation heaters

H1

NH1

Where an application involves high humidity or extreme temperature fluctuation, motors may be equipped with an anti-condensate heater.

A single-phase power supply is available in the auxiliary terminal board inside the main terminal box. Values for the absorbed power are listed here below:

(F54)

	H1 1~ 230V ± 10% P [W]	NH1 1~ 115V ± 10% P [W]
BX 80	10	10
BE 80

BX 90 ... BX 132	25	25
BE 90 ... BE 132MB		
BN 90 ... BN 160MR		
BX 160, BX 180	50	50
BE 160, BE 180		
BN 160, BN 200		

Warning!

Always remove power supply to the anti-condensante heater before operating the motor.

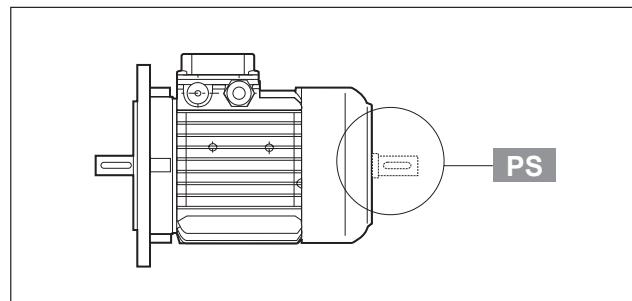

M12.10 Tropicalization**TP**

When option **TP** is specified, motor windings receive additional protection for operation in high humidity and temperature conditions.

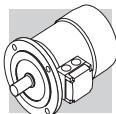

M12.11 Second shaft extension**PS**

This option is not compatible with variants RC, TC, U1, U2, EN1, EN2, EN3, EN4, EN5, EN6. For shaft dimensions please see motor dimensions tables.

(F55)

**M12.12 Backstop device****AL****AR**

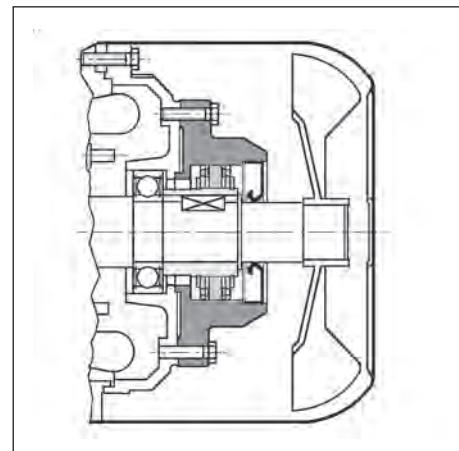

For applications where backdriving must be avoided, motors equipped with an anti run-back device can be used (available for the MX/ME and M series only). While allowing rotation in the direction required, this device operates instantaneously in case of a power failure, preventing the shaft from running back. The anti run-back device is life lubricated with special grease for this specific application. When ordering, customers should indicate the required rotation direction, AL or AR. Never use the anti run-back device to prevent reverse rotation caused by faulty electrical connection. Table (F56) shows rated and maximum locking torques for the anti run-back devices. A diagram of the device can be seen in Table (F57). Overall dimensions are same as the corresponding brake motor. The direction of free rotation is described in the "MOTOR OPTIONS" section of specifically dedicated sections to gear units.

(F56)

	Rated locking torque [Nm]	Max. locking torque [Nm]	Release speed [min ⁻¹]
M1	6	10	750
ME2 M2	16	27	650
ME3 M3	54	92	520
MX4 - ME4 M4	110	205	430

(F57)

M12.13 Rotor balancing

RV

Where low noise is a priority requirement, the option RV ensures reduced vibration in accordance with vibration class B.

The table below reports effective velocity of vibration for normal (A) and B grade balancing.

(F58)

Vibration level	Angular velocity n [min ⁻¹]	Limits of the vibration velocity (mm/s) BX 80 ≤ H ≤ BX 180L BE 80 ≤ H ≤ BE 180L BN 56 ≤ H ≤ BN 200
A	600 < n < 3600	1.6
B	600 < n < 3600	0.70

Values are obtained from measurements on freely suspended motor during no load operation; tolerance ±10%.

M12.14 Ventilation

Motors are cooled through outer air blow (IC 411 according to CEI EN 60034-6) and are equipped with a plastic radial fan, which operates in both directions.

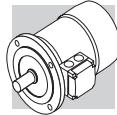

Ensure that fan cover is installed at a suitable distance from the closest wall so to allow air circulation and servicing of motor and brake, if fitted.

On request, motors can be supplied with independently power-supplied forced ventilation system starting from BN 71, M1, BE 80, ME2, BX 80 and MX2 size.

Motor is cooled by an axial fan with independent power supply and fitted on the fan cover (IC 416 cooling system).

This version is used in case of motor driven by inverter so that steady torque operation is possible even at low speed or when high starting frequencies are needed.

Brake motors of motors with rear shaft projection (PS option) are excluded.

This variant has two different models, called **U1** and **U2**, having the same longitudinal size. Longer side of fan cover (**DL**) is specified for both models in the table below. Overall dimension can be reckoned from motor size table.

(F59)

Extra length for servoventilated motors			
		ΔL_1	ΔL_2
BN 71	M1	93	32
BX 80 - BE 80 - BN 80	MX2 - ME2 - M2	127	55
BX 90 - BE 90 - BN 90	MX3	131	48
BX 100 - BE 100 - BN 100	MX3 - ME3 - M3	119	28
BX 112 - BE 112 - BN 112	MX4	130	31
BX 132 - BE 132 - BN 132	MX4 - ME4 - M4	161	51
BX 160 - BE 160, BX 180 - BE 180	MX5 - ME5	184	-

ΔL_1 = extra length to LB value of corresponding standard motor.

ΔL_2 = extra length to LB value of corresponding brake motor.
Only for BN motors.

U1

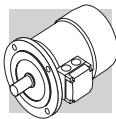

Fan wiring terminals are housed in a separate terminal box.

In brake motors of size BX 132 ... BX 160, BE 80 ... BE 160, MX 4 ... MX 5, ME 2 ... ME 5 - BN 71 ... BN 160MR, M1 ... M4L, with **U1** model, the release lever cannot be positioned to AA.

The option is not applicable to motors compliant with the CSA and UL norms (option CUS).

(F60)

		V a.c. $\pm 10\%$	Hz	P [W]	I [A]
BN 71	M1	1 ~ 230	50 / 60	22	0.12

M12.15 Rain canopy

RC

The rain canopy protects the motor from dripping and avoids the ingress of solid bodies. It is recommended when motor is installed in a vertical position with the shaft downwards.

Relevant dimensions are indicated in the table below.

The drip cover is not compatible with variants PS, EN1, EN2, EN3, EN4, EN5, EN6.

(F62)

		AQ	ΔV	
BN 63	M05	118	24	
BN 71	M1	134	27

M12.16 Textile canopy

TC

Option TC is a cover variant for textile industry environments, where lint may obstruct the fan grid and prevent a regular flow of cooling air.

This option is not compatible with variants EN1, EN2, EN3, EN4, EN5, EN6, PS, U1, U2.

Overall dimensions are the same as drip cover type RC.

M12.17 Feedback units

Motors may be combined with six different types of encoders to achieve feedback circuits. Configurations with double-extended shaft (PS) and rain canopy (RC, TC) are not compatible with encoder installation.

EN1

Incremental encoder, $V_{IN} = 5$ V, line-driver output RS 422.

EN2

Incremental encoder, $V_{IN} = 10\text{-}30$ V, line-driver output RS 422.

EN3

Incremental encoder, $V_{IN} = 12\text{-}30$ V, push-pull output 12-30 V

EN4

Encoder sin/cos, $V_{IN} = 4.5\text{-}5.5$ V, output Sinus 0.5V_{PP}.

EN5

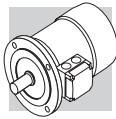

Absolute encoder singleturn, HIPERFACE® interface, $V_{IN} = 7\text{-}12$ V.

EN6

Absolute encoder multturn, HIPERFACE® interface, $V_{IN} = 7\text{-}12$ V.

(F63)

	EN1	EN2	EN3	EN4	EN5	EN6

If the encoder device (option EN_) is specified on motors BX 80 ... BX 132 - MX2 ... MX4 - BE 80 ... BE 132 - ME2 ... ME4 - BN 71 ... BN 160MR - M1 ... M4, along with the independent fan cooling (options U1, U2), the extra length of motor is coincident with that of the correspondent U1 and U2 execution.

M12.18 Surface protection

C_

When no specific protection class is requested, the painted (ferrous) surfaces of motors are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, motors can be delivered with C3 and C4 surface protection.

(F66)

SURFACE PROTECTION	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
C3	Urban and industrial environments with up to 100% relative humidity (medium air pollution)	120°C	C3
C4	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

Motors with optional protection to class C3 or C4 are available in a choice of colours. If no specific colour is requested (see the "PAINTING" option) motors are finished in RAL 7042.

Motors can also be supplied with surface protection for corrosivity class C5 according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

M12.19 Painting

RAL

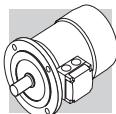

Gearboxes with optional protection to class C3 or C4 are available in the colours listed in the following table.

(F67)

PAINTING	Colour	RAL number
RAL7042*	Traffic Grey A	7042
RAL5010	Gentian Blue	5010
RAL9005	Jet Black	9005
RAL9006	White Aluminium	9006
RAL9010	Pure White	9010

* Gearboxes are supplied in this standard colour if no other colour is specified.

NOTE – "PAINTING" options can only be specified in conjunction with "SURFACE PROTECTION" options.

M12.20 Certificates

ACM

Certificate of compliance of motors

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

CC

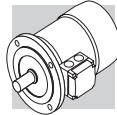

Inspection certificate

The document entails checking on order compliance, the visual inspection of external conditions and instrumental testing of the electrical characteristics in unloaded conditions. Units inspected are sampled within the shipping batch and marked individually.
